CURRICULUM VITAE

NAME AND DEGREES	Xuelin Huang, Ph.D.
OFFICE ADDRESS	The University of Texas MD Anderson Cancer Center 1400 Pressler Street FCT4.5084 Unit 1411 Houston, TX 77030
OFFICE PHONE	713-794-4172
OFFICE FAX	713-563-4242
OFFICE EMAIL	xlhuang@mdanderson.org

CURRENT APPOINTMENTS

Oct 01, 2019–Present	Dr. Mien-Chie Hung and Mrs. Kinglan Hung Endowed Professor Biostatistics The University of Texas MD Anderson Cancer Center
2019–Present	Deputy Chair Biostatistics The University of Texas MD Anderson Cancer Center
2017–Present	Member Quantitative Sciences University of Texas Graduate School of Biomedical Science
2017–Present	Adjunct Professor Biostatistics Rice University
2017–Present	Adjunct Professor Biostatistics University of Texas Health Science Center at Houston
Sep 2013–Present	Professor Biostatistics The University of Texas MD Anderson Cancer Center

EDUCATION, EXPERIENCE, AND SERVICE

DEGREES OBTAINED

May 2002	Ph.D., Biostatistics University of Michigan; Ann Arbor, Michigan
Jan 1997	M.S., Mathematics Texas A & M University; College Station, Texas
Sep 1994	BS, Probability & Statistics Peking University; Beijing, China

FACULTY ACADEMIC APPOINTMENTS

2017–Present	Adjunct Professor Biostatistics Rice University; Houston

2017–Present	Member Quantitative Sciences University of Texas Graduate School of Biomedical Science; Houston, TX
2017–Present	Adjunct Professor Biostatistics University of Texas Health Science Center at Houston; Houston, TX
Sep 2013–Present	Professor Biostatistics The University of Texas MD Anderson Cancer Center
Sep 2007–Aug 2013	Associate Professor Biostatistics The University of Texas MD Anderson Cancer Center
Sep 2002–Aug 2007	Assistant Professor Department of Biostatistics The University of Texas M. D. Anderson Cancer Center; Houston, TX
Sep 2000–Jul 2002	Research Assistant Department of Biostatistics University of Michigan; Ann Arbor, MI
Sep 1995–May 1997	Graduate Assistant Department of Mathematics Texas A & M University; College Station, TX

HONORS AND PRIZES

2017–Present	Fellow American Statistical Association
2002	Rackham Graduate School Travel Grant University of Michigan
2001	Best Student Paper Award Biopharmaceutical Section of the American Statistical Association
1999	National Science Foundation Traveling Grant NSF/CBMS Regional Conference in Statistical Inference in Genetic Data

COMMITTEE SERVICE

Sep 2018–Present	Member, Institutional Committee Clinical Research Committee (CRC1) The University of Texas MD Anderson Cancer Center
May 2015–May 2018	member, Institutional Committee Faculty Academic Review Committee (FARC) The University of Texas MD Anderson Cancer Center
2012–2015	Member, Institutional Committee GSBS Curriculum Committee The University of Texas MD Anderson Cancer Center
Sep 2011–Aug 2014	Member, Institutional Committee Clinical Research Committee (CRC4) The University of Texas MD Anderson Cancer Center
Sep 2006–Aug 2009	Member, Institutional Committee Institutional Animal Care and Use Committee The University of Texas MD Anderson Cancer Center

PROFESSIONAL SOCIETIES

2004–2006 Houston Area Chapter of American Statistical Association
2005–2006 President
2004–2005 Vice President

2002–2024 The Institute of Mathematical Statistics (IMS)
2002–Present Member

2002–2003 The International Society of Computational Biology (ISCB)
2002–2003 Member

2001–2024 The Royal Statistical Society (RSS)
2001–Present Member

2000–2024 The International Biometrics Society, Eastern Northern American Region (ENAR)
2000–Present Member

2000–Present The American Statistical Association (ASA)
2000–Present Member

GRANT REVIEW ACTIVITIES

Sep 2025–Jun 2029 Analytics and Statistics for Population Research Panel B Study Section (ASPB)
NIH
Regular Member/Reviewer

Apr 2025–May 2025 Special Emphasis Panel/Scientific Review Group
NIH
Ad Hoc Member/Reviewer

Oct 2024–Nov 2024 Analytics and Statistics for Population Research Panel B (ASPB)
NIH
Ad Hoc Member/Reviewer

2023 Clinical and Translational Exploratory/Developmental R21 & R03 Studies
NIH
Ad Hoc Member/Reviewer

Jun 2020 National Center for Advancing Translational Sciences (NCATS)
NIH
Ad Hoc Member/Reviewer

Dec 2019 HIV Coinfections and HIV Associated Cancers Study Section (HCAC)/AARR study section
NIH
Ad Hoc Member/Reviewer

2018 Bioengineering Sciences and Technologies (BST) IRG
NIH
Ad Hoc Member/Reviewer

2017 Biostatistical Methods and Research Design
NIH

Ad Hoc Member/Reviewer

2016 Academic Research Enhancement Award
NIH
Ad Hoc Member

2016 Biostatistical Methods and Research Design
NIH
2016 Ad Hoc Member

2009 Special Emphasis Panel
NIH
Ad Hoc Member/Reviewer

EDITORIAL ACTIVITIES

2019–2023 Associate Editor
Journal of the Royal Statistical Society, Series C

2017–Present Associate Editor
Statistics in BioSciences

2016–2018 Associate Editor
Biometrics

2011–2013 Member of Editorial Review Board
Journal of Clinical Oncology

PEER REVIEW ACTIVITIES

2019 Journal Reviewer (Referee)
Journal of the Royal Statistical Society, Series C

2019 Journal Reviewer (Referee)
Journal of Applied Statistics

2019 Journal Reviewer (Referee)
Journal of Statistical Planning and Inference

2019 Journal Reviewer (Referee)
Journal of Biopharmaceutical Statistics

2019 Journal Reviewer (Referee)
Journal of the American Medical Association

2019 Journal Reviewer (Referee)
PLOS ONE

2019 Journal Reviewer (Referee)
Computational Statistics and Data Analysis

2019 Journal Reviewer (Referee)
International Journal of Biostatistics

2019–2025 Journal Reviewer (Referee)
Statistics in Medicine

2019 Journal Reviewer (Referee)
BMC Bioinformatics

2019 Journal Reviewer (Referee)
Journal of Royal Statistical Society, Series B

2019 Journal Reviewer (Referee)
Biometrical Journal

2019	Journal Reviewer (Referee) Journal of the American Statistical Association
2019–2025	Journal Reviewer (Referee) Statistical Methods in Medical Research
2019–2025	Journal Reviewer (Referee) Lifetime Data Analysis
2019	Journal Reviewer (Referee) Pharmaceutical Statistics
2017	Journal Reviewer (Referee) Journal of Clinical Oncology
2017	Journal Reviewer (Referee) Journal of Investigative Dermatology
2017	Journal Reviewer (Referee) Blood
2017	Journal Reviewer (Referee) Oncotarget
2017	Journal Reviewer (Referee) Clinical Cancer Research
2017	Journal Reviewer (Referee) PLOS Computational Biology
2015	Journal Reviewer (Referee) Journal of Cancer
2015	Journal Reviewer (Referee) Biostatistics
2015	Journal Reviewer (Referee) Contemporary Clinical Trials
2015	Journal Reviewer (Referee) Biometrics
2015	Journal Reviewer (Referee) Annals of Biometrics and Biostatics
2015	Journal Reviewer (Referee) Leukemia
2015	Journal Reviewer (Referee) The Canadian Journal of Statistics
2014	Journal Reviewer (Referee) Statistics in Bioscience
2012	Journal Reviewer (Referee) Statistica Sinica
2010	Journal Reviewer (Referee) Medical care
2009	Journal Reviewer (Referee) Cancer
2009	Journal Reviewer (Referee) Epidemiology
2009	Journal Reviewer (Referee) Journal of Multivariate Analysis
2007	Journal Reviewer (Referee) Indian Journal of Medical research

2006 Journal Reviewer (Referee)
Cancer Investigation

OTHER ACTIVITIES

Member, Student Activity Committee, Department of Biostatistics, The University of Michigan, 1999-2000

Judge for Houston Science Fair, March 18, 2005

RESEARCH PROJECTS

GRANTS, CONTRACTS, AND SPONSORED RESEARCH AGREEMENTS

Active, Sep 01, 2024–Aug 31, 2026

High-dimensional Mediation Analysis of Cardiovascular Traits with Multi-omics Data
NIH/NCI, 1R21HL170213-01A1
Co-Investigator (Peng Wei PI) ($ 243,000 incl. indirect costs; $121,500/year)
The overall objective of this research is to employ state-of-the-art high-dimensional mediation analysis methods to quantify the role of multiplatform genomics markers in mediating the effect of environmental exposures and lifestyle factors on cardiovascular traits and diseases. PID16957

Active, May 12, 2023–Apr 30, 2027

Optimizing treatment decision by accounting for longitudinal biomarker trajectories and competing risks of each individual
NIH/NCI, 1R01CA272806-01A1
Principal Investigator ($ 977,890 incl. indirect costs; $246,499/year)
The goal of this proposal is to develop statistical methods to compare different treatment options for patients with chronic myeloid leukemia. The methods and software will be applied to other diseases to demonstrate the applications to broad situations with (1) aggressive and mild treatment options, and (2) multiple competing risks. PID15267

Active, Nov 01, 2022–Oct 31, 2027

A SIK2 Inhibitor, GRN-300, enhances Response to Paclitaxel and PARP Inhibitors and induces PD-L1 expression in Triple Negative Breast Cancer
American Cancer Society (ACS), FP00016130
Co-Investigator (Robert Bast Jr PI) ($ 720,000 incl. indirect costs; $144,000/year)
To determine the activity of GRN300 and PTX across TNBC and other types of breast cancers, testing whether the greatest activity will be seen in cancers with TP53 mutation; 2) To find whether GRN300 enhances PTX activity by affecting centrosome splitting, G2M arrest, polyploidy, PI3K signaling, survivin, and YAP1 nuclear translocation; 3) To determine whether PD-L1 is upregulated through cGAS/STING pathway; 4) To find whether GRN-300 enhances PARPi through Class IIa HDAC, decreasing DNA repair gene expression regulated by MEF2D; and 5) whether GRN300 enhances PTX activity and upregulates PD-L1 in patients. PID14732

Active, Sep 15, 2022–Aug 31, 2027

Bay Area & Anderson Team Against Acquired Resistance U54 Program (BAATAAR-UP)
NIH/NCI subaward via Univ California San Francisco, 2U54CA224081-05
Co-Investigator (Jack Roth PI) ($ 1,817,228 incl. indirect costs; $366,458/year)
To characterize and therapeutically counteract mechanisms of acquired resistance to molecularly-targeted therapies against mutant EGFR and KRAS in non-small cell lung cancer (NSCLC) by delineating the tumor-tumor microenvironment (TME) ecosystem and its plasticity during treatment. PID14443

Active, Dec 09, 2020–Nov 30, 2025

Targeting STAT3 for the Treatment of CDK4/6 Inhibitor Resistant Advanced Estrogen Receptor Positive Breast Cancer Patients

	NIH/NCI, 1R01CA255960-01 Co-Investigator (Khandan Keyomarsi PI) ($ 2,929,716 incl. indirect costs; $588,847/year) To test the efficacy of TTI-101 clinically to treat those patients who are likely to be unresponsive to CDK4/6 inhibitors. (1% effort/salary support to be applied when Clinical Trial begins) PID12299
Active, Sep 01, 2020–Aug 31, 2025	Comparative Modeling of Precision Breast Cancer Control Across the Translational Continuum NIH/NCI subaward via University of Wisconsin Madison, 5U01CA253911-03 PD/PI (Amy Trentham-Dietz PI) ($ 1,134,000 incl. indirect costs; $226,800/year) To identify precision approaches to reduce the burden of breast cancer throughout the cancer control continuum, including precision screening and treatment. PID11823
Active, Sep 01, 2020–Aug 31, 2025	SPORE: Targeting Lung Cancer Vulnerabilities NIH/NCI subaward via Un of Tx Southwestern Med Ctr - Dallas, 2P50CA070907-21 Co-Investigator (Jack Roth PI) ($ 5,687,627 incl. indirect costs; $1,137,525/year) To develop new therapeutic paradigms based on recently identified vulnerabilities acquired during lung cancer pathogenesis, and use this information to personalize the therapy for each lung cancer patient. PID11837
Active, Aug 31, 2019–Aug 30, 2025	Recruitment of Established Investigators Cancer Prevention & Research Institute of Texas (CPRIT), RR190079 Co-Investigator (Christopher Flowers PI) ($ 1,199,999 incl. indirect costs; $200,000/year) To augment the Texas state cancer registry linked with clinical data, pathological tissue samples, and IHC images. PID8198
Active, Jul 01, 2019–Jun 30, 2026	Cancer Center Support Grant (CCSG) - Biostatistics Resource Group (BRG) NIH/NCI, 5P30CA016672-47 Statistician (Draetta Giulio PI) ($ 77,483,432 incl. indirect costs; $11,069,062/year) To improve the standard of patient care, as researchers and clinicians work to eliminate cancer. PID858033 (Effort on this project is cyclical in nature)
Pending, May 01, 2026–Apr 30, 2028	Targeting the CXCR4 Chemokine Receptor to Overcome Drug Resistance in Chronic Lymphocytic Leukemia (CLL) Using Novel Orally Bioavailable CXCR4 Antagonists US Department of Defense, #TBA Key Person (Jan Burger PI) ($ 939,800 incl. indirect costs; $279,164/year) To provide statistical support for overall goals and specific aims. FP00027803
Pending, Apr 01, 2026–Mar 31, 2031	Reactivating TP53-Mutant T-Cells to Restore Anti-Leukemia Immunity in AML NATIONAL INSTITUTES OF HEALTH Key Person (Michael Andreeff PI) ($ 2,505,633 incl. indirect costs; $305,565/year) To provide statistical support for overall goals and specific aims. FP00026906
Pending, Apr 01, 2026–Mar 31, 2031	Integrative Gene-modified iMSC Strategy to Restore Anti-Tumor Immunity in Ovarian Cancer NATIONAL INSTITUTES OF HEALTH Co-Investigator (Michael Andreeff PI) ($ 2,583,113 incl. indirect costs; $315,013/year) To provide statistical support for overall goals and specific aims. FP00026905
Pending, Apr 01, 2026–Mar 31, 2031	Targeting MYC in TP53 Mutant Acute Myeloid Leukemias University of Texas at Austin Key Person (Michael Andreeff PI) ($ 1,635,003 incl. indirect costs; $200,000/year)

	To provide statistical support for overall goals and specific aims. FP00026772
Pending, Feb 21, 2026–Feb 20, 2031	Unleashing Cancer Immunogenicity to Potentiate T-cell Immunity in Acute Myeloid Leukemia NATIONAL INSTITUTES OF HEALTH Co-Investigator (Xufeng Chen PI) ($ 3,707,138 incl. indirect costs; $449,090/year) To provide statistical support for overall goals and specific aims. FP00026878
Pending, Dec 01, 2025–Nov 30, 2028	Reprogramming the Immune-excluded Ovarian Cancer Microenvironment with IL7/IL15-Secreting iMSCs CANCER PREVENTION RESEARCH INST OF TX Co-Investigator (Michael Andreeff PI) ($ 899,991 incl. indirect costs; $284,997/year) To provide statistical support for overall goals and specific aims. FP00026392
Pending, Dec 01, 2025–Nov 30, 2028	Targeting MYC in TP53 Mutant Acute Myeloid Leukemias R01, UNIVERSITY OF TEXAS AUSTIN Key Person (Michael Andreeff PI) ($ 419,995 incl. indirect costs; $132,998/year) To provide statistical support for overall goals and specific aims. FP00026243
Pending, Sep 01, 2025–Aug 31, 2030	(P50 Renewal) SPORE: Targeting Lung Cancer Vulnerabilities R01, Un of Tx Southwestern Med Ctr - Dallas, #TBA Co-Investigator (John Heymach PI) ($ 807,532 direct costs;$ 6,601,574 incl. indirect costs; $1,320,315/year) To provide statistical support for overall goals and specific aims. FP00023846
Pending, Jul 01, 2025–Jun 30, 2028	Zanidatamab (JZP598) in Patients With Early-Stage HER2/Neu Positive (HER2+) Breast Cancer (BC): A Phase 2Single-Arm Open-Label Pilot Trial R01, CONQUER CANCER FOUNDATION Mentor (Taiwo Adesoye PI) ($ 189,592 incl. indirect costs; $62,274/year) FP00025919
Pending, Jul 01, 2025–Jun 30, 2030	UPR/MDACC: Partnership for Excellence in Cancer Research (Linked Application 1 of 2) R01, NATIONAL INSTITUTES OF HEALTH Key Person (Sharon Giordano PI) ($ 699,305 direct costs;$ 5,769,956 incl. indirect costs; $1,153,991/year) is to enhance the quality, efficiency, and impact of ACTION's research projects through the provision of high-quality and timely data science and omics analysis, collaboration and consulting at all stages of research – i.e. concept development, study design, data gathering and management, database design and use, statistical analysis, and reporting.FP00021068_Res1
Pending, Jul 01, 2025–Jun 30, 2026	Comparative Modeling of Precision Breast Cancer Control Across the Translational Continuum NIH/NCI subaward via University of Wisconsin Madison, U01CA253911-S1 Principal Investigator ($ 96,657 incl. indirect costs; $59,117/year) To identify precision approaches to reduce the burden of breast cancer throughout the cancer control continuum, including precision screening and treatment.FP00009806_Rev3
Pending, Jun 01, 2025–May 31, 2030	Developing novel targeted therapies for Advanced Myeloproliferative Neoplasms R01, NATIONAL CANCER INSTITUTE Principal Investigator ($ 349,690 direct costs;$ 10,970,963 incl. indirect costs; $2,194,193/year) The overarching goal of this Advanced MPN SPORE is to validate actionable targets and discover novel therapies for advanced MPN. The SPORE proposes 3 projects supported by three Cores. FP00019364_Res1

Past, Jan 13, 2022–Dec 31, 2023	Therapeutic targeting of p53 reactivation-induced OXPHOS dependency and stress responses to overcome resistance to venetoclax/HMA in AML NIH/NCI, 5R21CA267401-02 Biostatistician (Michael Andreeff PI) ($ 445,500 incl. indirect costs; $226,789/year) To introduce a novel treatment strategy to combine MDM2 and XPO1 inhibition with VEN/HMA for AML patients resistant to the VEN/HMA therapy. PID13570
Past, Sep 01, 2021–Aug 31, 2023	Comparative Modeling of Precision Breast Cancer Control Across the Translational Continuum Supplement NIH/NCI, 3U01CA253911-02S1 Co-Investigator (Amy Trentham-Dietz PI) ($ 110,160 incl. indirect costs; $55,080/year) To estimate the lifetime outcomes of adult woman under different scenarios for breast cancer screening and explore whether there are differences in the balance of benefits, harms and efficiency of screening strategies in key sub-groups of the population based on race, breast density and other factors. (Effort effective 11/1/2021) PID13436
Past, Jun 01, 2021–May 30, 2023	2020-0487 Phase I/II Study of SP-2577 (Seclidemstat) in Combination with Azacitidine for patients with Myelodysplastic syndromes and Chronic Myelomonocytic Leukemia Research Agreement Research Agreement, Salarius Pharmaceuticals LLC, 2020-0487 Statistician (Montalban Bravo, Guillermo PI) ($ 880,000 incl. indirect costs; $441,209/year) Primary objectives: To determine the safety, tolerability and Maximum Tolerable Dose (MTD) of seclidemstat in combination with azacitidine and assess overall response rate (ORR) to seclidemstat in combination with azacytidine. Secondary objectives: To assess overall survival (OS), duration of response (DOR), relapse-free survival (RFS), and Leukemia-free survival (LFS) and safety profile. Correlative studies including correlation of response with disease subtypes, genomic profile and in vitro studies. (Effort effective 10/1/2021) PID12709
Past, Sep 30, 2020–Sep 29, 2024	Identifying Novel Therapeutic Targets and Combination Strategies for Patients with BPDCN Department of Defense (DOD), 1W81XWH2010683 Co-Investigator (Naveen Pemmaraju PI) ($ 890,842 incl. indirect costs; $222,710/year) To investigate mechanisms of response and resistance to the most advanced targeted therapies in BPDCN and assess potential for combination treatment in a clinical trial. PID12115
Past, Sep 01, 2019–Aug 31, 2024	UPR/MDACC: Partnership for Excellence in Cancer Research - DATAOmics NIH/NCI, 5U54CA096300-18 Core Leader (Elizabeth Travis PI) ($ 4,092,030 incl. indirect costs; $818,406/year) To assist the work of the Infection-Driven Malignancies Program for Advancing Careers and Translational Sciences (IMPACT), a cancer research partnership between UPR and MDACC. PID8218.
Past, Sep 01, 2019–Jun 30, 2023	University of Texas PDX Development and Trial Center Bioinformatics Core NIH/NCI, 5U54CA224065-04 Collaborator (Jack Roth PI) ($ 17,205,332 incl. indirect costs; $4,495,309/year) To provide centralized bioinformatics and biostatistical support for all projects. (Under NCE - Dr. Huang's effort ended effective 9/1/22) PID8290
Past, Sep 01, 2019–Jun 30, 2023	Ph1/2 Study of the Imipridone ONC201 for Treatment of AML IND125,203 (12/23/2014) NIH/Food and Drug Administration (FDA), 1R01FD006118-01A1 Co-Investigator (Michael Andreeff PI) ($ 999,996 incl. indirect costs; $261,273/year)

	To increase the cure rates of AML through clinical implementation of targeting a new cellular survival mechanism, i.e. mitochondrial (mt) unfolded protein response (mtUPR). (Effort ended effective 7/1/2021) PID8169
Past, Jul 01, 2019–Jun 30, 2024	Genetic and Epigenetic Biomarkers for B-cell Lymphoma NIH/NCI, 1R01CA233490-01A1 Co-Investigator (Ken He Young PI) ($ 1,250,000 incl. indirect costs; $250,000/year) Enhance understanding of the molecular basis for p53 dysregulation, advance the concept of cancer prognosis and risk biomarkers to include 3'UTRs, miRNAs, and cfDNA. FP00004569_Res1 / PID7976. (PI is no longer with the institution as of 9/15/19, effort ended effective 8/31/19).
Past, Apr 01, 2019–Mar 31, 2024	Elucidating and targeting subtype-specific driver in pancreatic cancer NIH/NCI, 5R01CA214793-04 Co-Investigator (Haoqiang Ying PI) ($ 1,830,000 incl. indirect costs; $366,000/year) To systematically explore the molecular underpinnings of PDAC maintenance and to identify context-dependent vulnerabilities as therapeutic targets. PID7670
Past, Sep 01, 2018–Aug 31, 2024	University of Texas M.D. Anderson Cancer Center SPORE - Leukemia Core C NIH/NCI, 5P50CA100632-19 Core Leader (Marina Konopleva PI) ($ 8,449,180 incl. indirect costs; $1,408,197/year) To carry out data analyses using appropriate statistical methodology, contribute to interpretation of results through written reports and frequent interaction with Project investigators. PID1325 / PID6815
Past, Sep 01, 2016–Aug 31, 2019	Dynamic Prediction of Time to Next Failure Event National Science Foundation (NSF), DMS-1612965/PD08-1269 Principal Investigator ($ 179,992 incl. indirect costs; $59,997/year) The goal of this proposal is to develop statistical methods for using dynamic covariate information to predict time to next failure event. PID5309
Past, Sep 01, 2016–Aug 31, 2019	UPR/MDACC: Partnership for Excellence in Cancer Research - BEBic NIH/NCI, 2U54CA096300-16 Core Leader (Barton PI) ($ 1,151,750 incl. indirect costs; $383,917/year) The Biostatistics and Bioinformatics Core provides access to statistical expertise to investigators and ensures appropriate study design, data gathering, analysis, results presentation and dissemination of research findings. PID4745
Past, Aug 31, 2016–Aug 30, 2021	Acute Myeloid Leukemia in the Immunosuppressed Microenvironment- CPRIT MIRA Core 3 - Biostatistics/Bioinformatics Cancer Prevention & Research Institute of Texas (CPRIT), RP160693-C3 Co-Investigator (Kim-Anh Do PI) ($ 3,256,760 incl. indirect costs; $651,352/year) To provide centralized biostatistics, bioinformatics, and database support for all Projects and Cores. PID600124
Past, Sep 01, 2015–Aug 31, 2021	Comparative Modeling: Informing Breast Cancer Control Practice and Policy NIH/NCI subaward via Georgetown University Medical Center, 5U01 CA199218 05 Co-Investigator (Mandelblatt/Berry PI) ($ 7,398,255 incl. indirect costs; $1,233,042/year) To develop model inputs related to treatment benefits and harms that have been developed in recent years. (Effort ended effective 8/31/2020) PID3477
Past, Sep 01, 2015–Aug 31, 2016	Pilot CISNET- BOLD Task Force Supplement Subaward from Georgetown University (NCI), U01CA152958 Co-Investigator (Jeanne Mandelblatt PI) ($ 93,215 incl. indirect costs; $93,215/year)

	The Breast Working Group has proposed new research on novel screening tests, strategies for management of DCIS, and evaluation of the impact of new systemic therapy approaches. PID3361
Past, Oct 01, 2013–Sep 30, 2018	Targeting Breast Cancer Stem Cells Breast Cancer Research Foundation, 13015010 Statistician (Michael Andreeff PI) ($ 308,836 incl. indirect costs; $61,767/year) Identify breast cancer initiating cells, and develop strategies that target breast cancer stem cells. Develop a novel treatment strategy for breast cancer and its metastases. PID313
Past, Sep 17, 2013–Jun 30, 2017	(PQD4) Signs of Inflammatory Breast Cancer are Caused by Stromal Field Effects NIH/NCI, 1 R01 CA180061-01 Statistician (Wendy Woodward PI) ($ 1,054,643 incl. indirect costs; $278,743/year) To identify and characterize IBC specific MMS interactions in normal adjacent breast tissue, to study the signaling that regulates these interactions, and to evaluate strategies to inhibit them.
Past, Sep 06, 2013–Jun 30, 2018	Cancer Center Support Grant - Biostatistics Shared Resource (PPSR-21) NIH/NCI, 2 P30 CA016672 38 Statistician (Ronald DePinho PI) ($ 3,040,976 incl. indirect costs; $631,734/year) The overarching goal is to improve the standard of patient care, as researchers and clinicians work to eliminate cancer. The Biostatistics Resource Group provides biostatistical expertise and quantitative research resources in support of all CCSG programs at MDACC.
Past, Jun 28, 2013–Jun 27, 2018	MDS Clinical Research Consortium Aplastic Anemia & MDS Intl Foundation (supported by the Evans Foundation), 13045729 Co-Investigator (Wei Garcia-Manero PI) ($ 1,350,000 incl. indirect costs; $270,000/year) To undertake unique studies and trials to significantly advance treatments and improve outcomes for patients with Myelodysplastic Syndromes (MDS). PID1196
Past, Apr 01, 2013–Mar 31, 2017	Hypoxia-Selective Kinase Inhibitors for Leukemia Therapy NIH/NCI, 5 R21 CA177049 02 Co-Investigator (Marina Konopleva PI) ($ 275,000 incl. indirect costs; $68,750/year) To provide mechanism-based rationale for eliminating leukemic cells within the hypoxic BM niches. Project in NCE, not effort or support. PID821
Past, Jun 01, 2012–Nov 30, 2012	The Role of Bioactive Lipids in Inflammation and Cancer (PC-A) NIH/NCI, 2 P01 CA077839 11A1 Statistician (Raymond DuBois PI) ($ 616,258 incl. indirect costs; $1,235,902/year) To provide direction in the scientific and administrative level of the program project, provide biostatistical support, and coordinate data analysis and analytical efforts.
Past, Sep 01, 2010–Aug 31, 2016	Comparative Modeling: Informing Breast Cancer Control Practice & Policy NIH/NCI (Subcontract from Georgetown University), 5 U01 CA152958 05 Statistician (Jeanne Mandelblatt PI) To develop model inputs related to treatment benefits and harms that have been developed in recent years. PID950864
Past, Apr 05, 2010–Mar 31, 2012	Combined inhibition of CXCR4 and FLT3-ITD signaling in acute myeloid leukemia NIH/NCI, 1 R21 CA143805 01A1 Statistician (Michael Andreeff PI) ($ 486,682 incl. indirect costs; $245,019/year) To conduct a phase I/II clinical trial to determine the safety and efficacy of AMD3100, G-CSF and escalating doses of the FLT3-ITD inhibitor Sorafenib in

	patients with AML harboring FLT3-ITD mutation and study the in vivo biological effects of disrupting SDF-1ά/CXCR4 interactions by AMD3100/G-CSF.
Past, Sep 21, 2009–Aug 31, 2013	Plerixafor/G-CSF with Sorafenib for Acute Myelogenous Leukemia with FLT3-ITD Mutations (IND 104371) NIH/FDA, 5 R01 FD003733 03 Statistician (Michael Andreeff PI) The specific aims of this project are: 1) To conduct a phase I clinical trial to determine the safety of AMD3100, G-CSF and Sorafenib in patients with AML; and 2) To study the in vivo biological effects of disrupting SDF-1 alpha;/ CXCR4 interaction by AMD3100/G-CSF with focus on protein phosphorylation status.
Past, Mar 01, 2009–Feb 28, 2012	Targeting the leukemia microenvironment by CXCR4 inhibition in stem cell transplantation for AML NIH/NCI, 5 R21 CA137637 02 Co-Investigator (Marina Konopleva PI) ($ 420,000 incl. indirect costs; $140,000/year) The goal is to ascertain if the efficacy of chemotherapy used in the conditioning regimen in the setting of allogenic stem cell transplantation in myeloid malignancies can be improved by drugs that target the interactions between chemokine receptor CXCR4 on leukemia cells and its ligand SDF-1 produced by bone marrow microenvironment
Past, Sep 29, 2008–Aug 30, 2013	UPRCCC/MDACC: Partnership for Excellence in Cancer Research (PC-D) NIH/NCI, 5 U54 CA096300 10 Core Leader (Raymond DuBois PI) ($ 130,103 incl. indirect costs; $26,455/year) The objective is to establish a comprehensive long-term mutually beneficial relationship to target and eradicate cancer health disparities and to regain NCI-designation for the UPRCCC. The Biostatistics Core will support all programs in Cancer Research, Training and Outreach.
Past, Sep 01, 2008–Apr 30, 2013	University of Texas M.D. Anderson Cancer Center SPORE - Leukemia (PC-C) NIH/NCI, 5 P50 CA100632 10 Co-Director of Biostatistics Core (Hagop Kantarjian PI) ($ 448,589 incl. indirect costs; $96,258/year) To provide biostatistical expertise in the design and conduct of laboratory experiments and clinical trials arising from the research proposed in this application; provide statistical analysis and interpretation of all data collected under the SPORE Projects, Developmental Projects, and other Cores; and provide reliable data capture and storage functions, user-oriented retrieval capability, and effective mechanisms for ensuring patient confidentiality.
Past, Dec 07, 2007–Nov 30, 2011	Effective Survellance Strategies for Melanoma Patients NIH/NCI, 5 R01 CA127328 03 Collaborator (Janice Cormier PI) ($ 616,881 incl. indirect costs; $154,963/year) The major goal is to improve the care of patients with melanoma by developing tools to improve clinical decision making for clinicians, patients, and public policymakers. We propose to use techniques of decision science to assimilate current data and examine outcomes based on the natural history of disease to determine effective and cost-effective surveillance strategies for melanoma patients.
Past, Sep 20, 2007–Aug 31, 2012	Therapy of AML (PC-C2) NIH/NCI, 5 P01 CA055164 19 Co-Director of Biostatistics Core (Michael Andreeff PI) ($ 515,167 incl. indirect costs; $104,175/year) The major goal of this core provides fundamental biostatistical support for the projects in the program. Consultation and advice in the design, conduct, analysis

	and re-porting of clinical trials and laboratory experiments are provided as well as statistical evaluation of relationships between patients.
Past, Jan 08, 2007–Jun 30, 2013	3T Perfluorocarbon-Filled Endorectal Magnetic Resonance Spectroscopic Imaging of Prostate Carcinoma (CT) Department of Defense (DOD), W81XWH-07-1-0110 03 Statistician (Haesun Choi PI) ($ 659,102 incl. indirect costs; $101,808/year) 3T Perfluorocarbon-Filled Endorectal Magnetic Resonance Spectroscopic Imaging of Prostate Carcinoma. The objectives of this study are 1) to evaluate the feasibility of 3T MRS of prostate for an improved spectral resolution by using a perfluorocarbon compound (PFC)-filled endorectal coil. 2) to characterize the abnormal peak areas of Chi, Cho, Po for the prostate carcinoma in the peripheral zone, 3) and to establish a systematic grading system for tumor detection.
Past, Dec 01, 2005–Mar 31, 2021	Genetics and Biology of Pancreatic Ductal Adenocarcinoma NIH/NCI, 5P01CA117969-15 Biostatistician (Ronald DePinho PI) ($ 30,719,472 incl. indirect costs; $2,004,041/year) To elucidate oncogenic Kras (Kras*)-regulated metabolic pathways mediating pancreatic ductal adenocarcinoma (PDAC) tumor maintenance and define collateral metabolic dependencies. PID4317
Past, Jun 21, 2005–May 31, 2011	New Approaches to the Biology and Treatment of Myelodysplastic Syndromes (MDS) (PC-C) NIH/NCI, 5 P01 CA108631 05 Co-Investigator (Hagop Kantarjian PI) ($ 468,910 incl. indirect costs; $78,908/year) The primary goal of the PPG is to develop new therapies for both low and high-risk forms of MDS. The PPG's second goal is to gain further insight into the molecular pathogenesis of MDS. The PPG's third goal is to enhance the ability to provide accurate prognoses.
Not funded, Mar 01, 2025–Feb 29, 2028	MYC-GSPT1-directed Protein Degradation as Novel Therapeutic Modality for TP53 Mutant Acute Myeloid Leukemia Cancer Prevention & Research Institute of Texas (CPRIT), #TBA Biostatistician (Michael Andreeff PI) ($ 899,992 incl. indirect costs; $299,997/year) To provide statistical support for overall goals and specific aims. FP00023229
Not funded, Dec 31, 2024–Dec 30, 2027	Transplantation of cadaveric lung progenitors for the treatment of pulmonary fibrosis Department of Defense (DOD), PR240686 Co-Investigator (Yair Reisner PI) ($ 2,672,408 incl. indirect costs; $890,803/year) Optimize a tacrolimus-based immune suppression protocol for transplantation of allogeneic T + B depleted lung cells in the SPC-Cre/TRF1fl/fl mouse model of lung fibrosis. FP00022795
Not funded, Oct 01, 2024–Sep 30, 2029	MYC Protein Degradation Deconstructs Leukemia Cellular Hierarchy and Rewires Metabolism in TP53 Mutated Acute Myeloid Leukemi NATIONAL INSTITUTES OF HEALTH, #TBA Biostatistician (Michael Andreeff PI) ($ 2,428,418 incl. indirect costs; $485,684/year) To provide statistical support for overall goals and specific aims. FP00021931
Not funded, Sep 01, 2024–Aug 31, 2027	Targeting HSP90-epichaperome and mitochondrial HSP90 TRAP1 in therapy-resistant acute myeloid leukemia Department of Defense (DOD), #TBA Biostatistician (Bing Carter PI) ($ 1,579,795 incl. indirect costs; $526,598/year) Epichaperomes and TRAP1 are essential for the growth and survival of AML and AML stem/progenitor cells harboring TP53 and oncogenic "signaling" mutations

	and that inhibition of epichaperomes targets AML cells and stem/progenitor cells, enhances VEN activity, and prevents the outgrowth of VEN-resistant subclones, while targeting TRAP1 suppresses. FP00020571
Not funded, Jul 01, 2024–Jun 30, 2029	HSP90-epichaperome and mitochondrial HSP90 TRAP1 inhibition in therapy-resistant AML NIH/NCI, #TBA Biostatistician (Bing Carter PI) ($ 2,025,000 incl. indirect costs; $405,000/year) To provide statistical support for overall goals and specific aims. FP00020916
Not funded, Jul 01, 2024–Jun 30, 2029	SPORE University of Texas M.D. Anderson Cancer Center-Leukemia NIH/NCI, #TBA Core Director (Hagop Kantarjian PI) ($ 11,661,429 incl. indirect costs; $2,332,286/year) The overarching goal of this Leukemia SPORE remains to discover novel therapies and actionable targets in leukemia. FP00020227
Not funded, Apr 01, 2024–Mar 31, 2029	MYC Protein Degradation in TP53 mutant AML NIH/NCI, 1R01CA289741-01 Biostatistician (Michael Andreeff PI) ($ 2,827,707 incl. indirect costs; $565,541/year) The overall goal of the project is to define the biological role of MYC (c-MYC) in the cellular hierarchy of TP53mut AML and to develop a novel treatment strategy of degrading c-MYC proteins in TP53 mutant AML, Ven/hypomethylating agent (HMA)-resistant AML. FP00019780
Not funded, Dec 01, 2023–Nov 30, 2028	Optimizing TROP2-targeted antibody-drug conjugate therapy in breast cancer NIH/NCI, 1R01CA285457-01 Co-Investigator (Funda Meric-Bernstam PI) ($ 3,587,684 incl. indirect costs; $717,537/year) Our long-term goal is to optimize treatment selection for breast cancer patients, with focus on biomarker-driven treatment selection and rational combinations. Our short-term goal is to optimize treatment with the TROP2-targeted ADCs SG and Dato-DXd. FP00018558
Not funded, Dec 01, 2023–Nov 30, 2028	Optimizing HER2-targeted therapy with the biparatropic HER2 antibody zanidatamab NIH/NCI, 1R01CA285469-01 Co-Investigator (Funda Meric-Bernstam PI) ($ 4,049,942 incl. indirect costs; $809,988/year) Our long-term goal is to optimize treatment selection for patients with HER2+ tumors. Our short-term goal is to identify predictors of response to zanidatamab and to overcome intrinsic and acquired resistance. FP00018679
Not funded, Oct 01, 2023–Sep 30, 2026	Optimizing clinical response and characterizing resistance to TOP1 targeting in triple negative breast cancers CONQUER CANCER FOUNDATION, #TBA Co-Investigator (Senthil Damodaran PI) ($ 450,000 incl. indirect costs; $150,000/year) To elucidate the mechanisms of response and resistance to TOP1 targeting and whether epigenetic modulation of TROP2 and SLFN11 can enhance clinical activity. FP00019940
Not funded, Sep 01, 2023–Aug 31, 2028	SPORE University of Texas M.D. Anderson Cancer Center-Leukemia NIH/NCI, #TBA Director ($ 11,629,799 incl. indirect costs; $2,325,960/year) The overarching goal of this Leukemia SPORE remains to discover novel therapies and actionable targets in leukemia. FP00015698_Res1
Not funded, Sep 01, 2023–Aug 31, 2028	SPORE University of Texas M.D. Anderson Cancer Center-Leukemia NIH/NCI, 2P50CA100632-21

	Director (Marina Konopleva PI) ($ 11,159,161 incl. indirect costs; $2,231,832/year) To provide statistical support for overall goals and specific aims. FP00015698
Not funded, Jul 01, 2023–Jun 30, 2028	University of Texas PDX Development and Trial Center NIH/NCI, 2U54CA224065-05 Project Co-Lead ($ 6,572,274 incl. indirect costs; $1,314,455/year) To build and manage a centralized PDX model database and provide a full set of bioinformatical, computational and statistical support and integrate all the projects in this PDX U54 program. We will contribute by providing computational, bioinformatical and statistical supports, applying and developing optimal bioinformatical and statistical algorithms, tools and pipelines. FP00017665
Not funded, Jul 01, 2023–Jun 30, 2025	High-dimensional Mediation Analysis of Cardiovascular Traits with Multi-omics Data NIH/NHLBI, 1R21HL170213-01 Co-Investigator ($ 243,000 incl. indirect costs; $121,500/year) The overall objective of this research is to employ state-of-the-art high-dimensional mediation analysis methods to quantify the role of multiplatform genomics markers in mediating the effect of environmental exposures and lifestyle factors on cardiovascular traits and diseases. FP00017914
Not funded, Apr 01, 2023–Mar 31, 2028	MD Anderson Faculty Institutional Recruitment for Sustainable Transformation (FIRST) Program NIH/NCI, 1U54CA280881-01 Biostatistics Mentor (Elizabeth Travis PI) ($ 16,596,900 incl. indirect costs; $3,319,380/year) The overall goal of the MD Anderson Faculty Institutional Recruitment for Sustainable Transformation (FIRST) Program is to develop a cluster recruitment strategy and career development program that improves diversity and generates evidence, policies, processes, and procedures to support long term institutional change. FP00017001
Not funded, Apr 01, 2023–Mar 31, 2027	DNA methylation signatures in leukocytes and plasma as predictors of aggressive prostate cancer in African Americans NIH/NCI, 1R01CA278873-01 Co-Investigator (Jian Gu PI) ($ 2,539,221 incl. indirect costs; $634,805/year) The overarching goal of this project is to develop a blood-based biomarker panel that can accurately predict the presence of clinically significant PCa in AA men. FP00016829
Not funded, Mar 01, 2023–Feb 28, 2026	Circulating cell-free DNA methylation signature as predictors of aggressive prostate cancer in African Americans Cancer Prevention & Research Institute of Texas (CPRIT), RP230164 Collaborator (Jian Gu PI) ($ 1,050,000 incl. indirect costs; $350,000/year) The overarching goal of this project is to develop a liquid biopsy marker panel that can accurately predict the presence of clinically significant PCa in AA men. FP00016645
Not funded, Dec 01, 2022–Nov 30, 2026	Simulation Modeling to Inform Clinical Translation of the Emerging Breast Cancer Therapy American Cancer Society subaward via Georgetown University, #TBA PD/PI (Young Chandler PI) ($ 240,001 incl. indirect costs; $60,000/year) To conduct collaborative modeling research to address early detection and treatment management issues. FP13524_Res1
Not funded, Oct 01, 2022–Sep 30, 2023	Therapeutic targeting of p53 reactivation-induced metabolic reprogramming and stress responses to overcome resistance to venetoclax/HMA in AML Elsa U Pardee Foundation, #TBA

	Biostatistician (Michael Andreeff PI) ($ 183,426 incl. indirect costs; $183,426/year) To provide statistical support for overall goals and specific aims. FP00016508
Not funded, Oct 01, 2022–Sep 30, 2027	Mechanisms of Venetoclax Resistance in AML Leukemia and Lymphoma Society, #TBA Biostatistician (Michael Andreeff PI) ($ 4,999,977 incl. indirect costs; $999,995/year) To provide statistical support for overall goals and specific aims. FP00016251
Not funded, Oct 01, 2022–Sep 30, 2023	Targeting Mitochondrial Respiration To Enhance Ferroptosis in Acute Myeloid Leukemia ELSA U PARDEE FOUNDATION, #TBA Biostatistician (Jo Ishizawa PI) ($ 189,000 incl. indirect costs; $189,000/year) To provide statistical support for overall goals and specific aims. FP00016486
Not funded, Sep 30, 2022–Sep 29, 2026	TRANS-END: A transformative program toward ending breast cancer through personalized risk assessment, tailored screening, and interception Department of Defense (DOD), #TBA Co-Investigator (Samir Hanash PI) ($ 9,281,003 incl. indirect costs; $2,320,251/year) To develop a blood test that allows a personalized assessment of risk for obese women. FP00014776
Not funded, Sep 01, 2022–Aug 31, 2026	Simulation Modeling of Cancer Therapeutic Advances: A Tool to Translate Trial Results into Practice NIH subaward via Georgetown University, 1R01CA276149-01 PD/PI (Young Chandler PI) ($ 400,000 incl. indirect costs; $100,000/year) To use simulation modeling to extend the ASCO value framework to support oncologists and their patients in shared decision-making. FP15852
Not funded, Sep 01, 2022–Aug 31, 2027	Mechanisms of Mitochondria-Mediated Adaptive Resistance in AML NIH/NCI, 1U54CA274230-01 Biostatistician (Michael Andreef PI) ($ 7,005,500 incl. indirect costs; $1,401,100/year) To counteract the VEN acquired resistance and mitochondrial adaptive machinery of AML cells for maximal therapeutic efficacy using a three-pronged approach.
Not funded, Sep 01, 2022–Aug 31, 2027	BAY AREA & ANDERSON TEAM AGAINST ACQUIRED RESISTANCE U54 PROGRAM (BAATAAR-UP) Subaward-Subcontract via Univ Of California San Francisco, #TBA Co-Investigator (Jack Roth PI) ($ 83,877 incl. indirect costs; $16,775/year) To provide statistical support for overall goals and specific aims. FP00015005_Rev1
Not funded, Jul 01, 2022–Jun 30, 2025	Harnessing Mitochondria-mediated Enhancement of Ferroptosis Induction in Therapy Resistant AML Leukemia and Lymphoma Society, #TBA Biostatistician (Jo Ishizawa PI) ($ 600,000 incl. indirect costs; $200,000/year) The goal of this project is to provide a novel preclinical rationale of mitochondrial ferroptosis by harnessing mitochondrial machineries in therapy-resistant AMLs. FP00015791
Not funded, Jul 01, 2022–Jun 30, 2026	Optimizing treatment decision by accounting for longitudinal biomarker trajectories and competing risks of each individual NIH/NCI, 1R01CA272806-01 Principal Investigator ($ 1,000,000 incl. indirect costs; $250,000/year) The goal of this proposal is to develop statistical methods to compare different treatment options for patients with chronic myeloid leukemia. The methods and software will be applied to other diseases to demonstrate the applications to

	broad situations with (1) aggressive and mild treatment options, and (2) multiple competing risks. FP13846
Not funded, Jul 01, 2022–Jun 30, 2026	Simulation Modeling to Inform Clinical Translation of Emerging Breast Cancer Therapies NIH/NCI Subaward via Georgetown University, 1R01CA266441-01A1 PD/PI (Young Chandler PI) ($ 648,000 incl. indirect costs; $162,000/year) To conduct collaborative modeling research to address early detection and treatment management issues. FP13084_Res1
Not funded, Apr 01, 2022–Mar 31, 2027	A SIK2 inhibitor, ARN3261, enhances Response to Paclitaxel and PARP inhibitors in Triple Negative Breast Cancer NIH/NCI, 1R01CA269448-01 Co-Investigator (Robert Bast Jr PI) ($ 2,323,107 incl. indirect costs; $464,621/year) To determine the activity and mechanism(s) of action of ARN3261 and paclitaxel against triple negative breast cancer (TNBC) cell lines, their xenografts and PDXs. FP00013782
Not funded, Apr 01, 2022–Mar 31, 2024	HSP90 as therapeutic target in TP53-mutant acute myeloid leukemia R01, NIH/NCI, 1R21CA270985-01 Biostatistician (Bing Carter PI) ($ 275,000 incl. indirect costs; $137,500/year) To determine the efficacy and mechanisms of action of HSP90 inhibition in TP53-mutant AML cells and AML stem/progenitor cells in vitro and assess the therapeutic efficacy of PU-H71 or its combination with VEN in a TP53-mutant AML xenograft and PDX models in vivo. FP00014297
Not funded, Mar 01, 2022–Feb 28, 2026	A SIK2 inhibitor, ARN3261, enhances Response to Paclitaxel and PARP inhibitors in Triple Negative Breast Cancer Cancer Prevention & Research Institute of Texas (CPRIT), #TBA Co-Investigator (Robert Bast Jr PI) ($ 1,875,273 incl. indirect costs; $468,818/year) To determine the activity and mechanism(s) of action of ARN3261 and paclitaxel against triple negative breast cancer (TNBC) cell lines, their xenografts and PDXs. FP00013783
Not funded, Mar 01, 2022–Feb 28, 2025	Development and Optimization of Multiplex Assay For DLBCL Risk Assessment Cancer Prevention & Research Institute of Texas (CPRIT), #TBA Collaborator (Timothy McDonnell PI) ($ 997,489 incl. indirect costs; $332,496/year) To address the current limitations in risk-stratification of DLBCL patients by developing and validating a DNA/RNA-based clinical assay. (1% in years 1 & 2, 5% effort in year 3) FP00013141
Not funded, Jan 01, 2022–Dec 31, 2025	Simulation Modeling to Inform Clinical Translation of the Emerging Breast Cancer Therapy American Cancer Society subaward via Georgetown University, #TBA PD/PI ($ 733,816 incl. indirect costs; $183,454/year) To conduct collaborative modeling research to address early detection and treatment management issues. FP00013524
Not funded, Sep 01, 2021–Aug 31, 2025	Simulation Modeling to Inform Clinical Translation of Emerging Breast Cancer Therapies NIH/NCI subaward via Georgetown University, 1R01CA266441-01 PD/PI (Xuelin Huang PI) ($ 1,767,992 incl. indirect costs; $441,998/year) To conduct collaborative modeling research to address early detection and treatment management issues. FP00013084
Not funded, Sep 01, 2021–Aug 31, 2026	MD Anderson Faculty Institutional Recruitment for Sustainable Transformation (FIRST) Program NIH/NCI, 1U54CA267667-01

	Mentor (Biostatistics) (Elizabeth Travis PI) ($ 1,659,690 incl. indirect costs; $331,938/year) To provide statistical support for overall goals and specific aims. (Pending sponsor review) FP00013083
Not funded, Sep 01, 2021–Aug 31, 2024	Collaborative Research: Individually tailored hierarchical Bayesian models for longitudinal biomarker monitoring and prediction of disease progression National Science Foundation (NSF), 2113716 Principal Investigator ($ 470,304 incl. indirect costs; $156,768/year) To deepen the understanding of the dynamic nature of longitudinal predictive biomarkers associated with disease progression and to allow clinical decisions be tailored to individual patients biomarker trajectories to optimize their outcomes. FP00012775
Not funded, Jul 01, 2021–Jun 30, 2026	The University of Texas MD Anderson Cancer Center SPORE in Breast Cancer NIH/NCI, 1P50CA254874-01A1 Core Co-Director (Kelly Hunt PI) ($ 11,244,358 incl. indirect costs; $2,248,872/year) To improve outcomes for advanced breast cancer patients. FP00009946_Res1
Not funded, Jul 01, 2021–Jun 30, 2026	Hierarchical Bayesian Models of Longitudinal Biomarker Measurements for Personal Monitoring and Early Prediction of Disease Progression NIH/NHLBI Subaward via Penn State University, 1R01HL158861-01 PD/PI (Xuelin Huang / Shouhao Zhou PI) ($ 769,500 incl. indirect costs; $153,900/year) To develop innovative and practical statistical methods and computer software programs for real-time prediction and prevention of imminent failure events for patients with chronic conditions. FP00011911
Not funded, Jul 01, 2021–Jun 30, 2026	Development and Optimization of Multiplex Assay For DLBCL Risk Assessment NIH/NCI, 1U01CA263852-01 Co-Investigator (Timothy McDonnell PI) ($ 405,000 incl. indirect costs; $81,000/year) To address the limitation of the current schema for classifying DLBCL and this critical gap in knowledge by establishing an integrated assay that will enable high-risk DLBCL patients to be identified. FP00012050
Not funded, Apr 01, 2021–Mar 31, 2024	Re-sensitizing TP53-mutant acute myeloid leukemia to BH3 mimetics by targeting WNT/beta-catenin/ARC signaling Department of Defense (DOD), CA200549 Biostatistician (Bing Carter PI) ($ 491,013 incl. indirect costs; $163,671/year) To understand the regulation of WNT/beta-catenin/ARC signaling by WT p53 and its deregulation in therapy resistance in TP53-mutant AML and develop novel combinatorial strategies targeting the signaling to restore drug sensitivity and improve treatment outcomes for patients with TP53-mutant AML. FP00011851
Not funded, Apr 01, 2021–Mar 31, 2023	Cell death pathways in non-genotoxic activation of p53 in leukemias NIH/NCI, 1R21CA260090-01 Biostatistician (Michael Andreeff PI) ($ 222,750 incl. indirect costs; $111,375/year) To define the involvement of different modes of regulated cell death (RCD), and the cell trajectories, the sequential transition of different RCD modes, in response to p53 activation in leukemias. FP00011421
Not funded, Apr 01, 2021–Mar 31, 2026	Re-sensitizing TP53-mutant acute myeloid leukemia to BH3 mimetics by targeting WNT/beta-catenin/ARC signaling NIH/NCI, 1R01CA259032-01 Biostatistician (Bing Carter PI) ($ 405,000 incl. indirect costs; $81,000/year) To understand the regulation of WNT/B-catenin/ARC signaling by p53 and its deregulation in therapy resistance in TP53-mutant AML, and to re-sensitize

	TP53-mutant AML to BH3 mimetics by targeting the WNT/B-catenin/ARC signaling. FP00011319
Not funded, Apr 01, 2021–Mar 31, 2025	Comparison of Survival Time for Leukemia Patients under Different Treatment Options NIH/NCI, 1R01CA251688-01A1 PD/PI ($ 412,198 incl. indirect costs; $103,050/year) The goal of this proposal is to develop statistical methods to compare different treatment options for patients with chronic myeloid leukemia (CML), whether to continue on targeted therapies, or to receive a stem cell transplant. FP9295_Res1
Not funded, Sep 01, 2020–Aug 31, 2025	The University of Texas MD Anderson Cancer Center SPORE in Breast Cancer NIH/NCI, 1P50CA254874-01 Core Co-Director (Kelly Hunt PI) ($ 2,248,862 incl. indirect costs; $449,772/year) To improve outcomes for advanced breast cancer patients. (Under funding consideration as of 6/25/20) FP00009946
Not funded, Sep 01, 2020–Aug 31, 2024	Evidence-Based Continuous Monitoring and Early Prediction of Progression for Chronic Diseases National Science Foundation (NSF), 1953737 Principal Investigator ($ 1,229,257 incl. indirect costs; $307,314/year) To estimate subject-specific trajectory to capture the longitudinal biomarker data structures and functional patterns by applying Bayesian hierarchical models and monitoring CML and asthma. / FP9186
Not funded, Sep 01, 2020–Aug 31, 2025	Comparison of Survival Time for Leukemia Patients under Different Treatment Options NIH/NCI, 1R01CA251688-01 Principal Investigator ($ 1,363,433 incl. indirect costs; $272,687/year) To develop statistical methods to compare different treatment options for patients with chronic myeloid leukemia (CML), to decide whether or not to receive a stem cell transplant (SCT). FP00009295
Not funded, Mar 01, 2020–Feb 28, 2023	Genetic Dissection of p53/Mdm2 Function in the Microenvironment of Acute Myeloid Leukemia Cancer Prevention & Research Institute of Texas (CPRIT), #TBA Co-Investigator (Michael Andreeff PI) ($ 854,999 incl. indirect costs; $285,000/year) To identify new targets in the leukemia microenvironment whose inhibition prevents development of chemoresistance, and thus increases AML cures. FP00005707_Res1
Not funded, Sep 01, 2019–Aug 31, 2024	Elucidating and targeting subtype-specific driver in pancreatic cancer NIH/NCI, 1R01CA244423-01 Co-Investigator (Haoqiang Ying PI) ($ 2,000,000 incl. indirect costs; $400,000/year) To systematically explore the molecular underpinnings of PDAC maintenance and to identify context-dependent vulnerabilities as therapeutic targets. FP00007383
Not funded, Sep 01, 2019–Aug 31, 2022	Optimal Personalized Treatment Decisions by Multi-State Models Joint with Functional Principal Component Analyses for Longitudinal Biomarker Data National Science Foundation (NSF), FP00007058 Principal Investigator ($ 193,369 incl. indirect costs; $64,456/year) Model the transitions of multiple disease states and identify the optimal timing for leukemia patients to receive stem cell transplant.
Not funded, Sep 01, 2019–Aug 31, 2024	Molecular Predictors Associated With Unique Ancestry Driven Prostate Cancer Health Disparities Among African Americans And Puerto Rican Men NIH/NCI, 1R01CA232326-01A1

	Co-Investigator (Curtis Pettaway PI) ($ 2,892,438 incl. indirect costs; $578,488/year) To leverage the experience of our unique multidisciplinary team to assess the contribution of PCa risk SNPs including rs7824364, MLS , clinicopathologic, and epidemiologic data with the goal of developing unique predictive models related to PCa diagnosis, disease phenotype, and cancer recurrence among AA and PR men. FP00003951_Res1
Not funded, Jul 01, 2019–Jun 30, 2023	Optimal Stage and Timing for Leukemia Patients to Receive Stem Cell Transplants NIH/NCI, 1R01CA234032-01A1 Principal Investigator ($ 1,023,488 incl. indirect costs; $255,872/year) Medical investigators and statisticians will work together to identify the optimal timing to initiate more aggressive treatments, with the ultimate goal of maximally prolonging patients overall survival times. /FP00003611_Res1
Not funded, Jul 01, 2019–Jun 30, 2020	Characterization of Immunobiology of Chronic Myeloid Leukemia to Inform Novel Immunotherapeutic Approaches Conquer Cancer Foundation, FP00006448 Co-Investigator (Abhishek Maiti PI) ($ 47,499 incl. indirect costs; $47,499/year) Characterize immunobiology of CML to inform immunotherapeutic approach
Not funded, Jul 01, 2019–Jun 30, 2023	Circulating DNA methylation signatures as predictors of aggressive prostate cancer in African Americans and European Americans NIH/NCI, 1 R01 CA236956-01 Co-Investigator (Jian Gu PI) ($ 2,000,844 incl. indirect costs; $500,211/year) To identify specific DNA methylation signatures for aggressive PCa tumors. FP000054881
Not funded, Apr 01, 2019–Mar 31, 2024	SPORE University of Texas M.D. Anderson Cancer Center-Leukemia NIH/NCI, FP00002421_Res1 Director, Core 3 (Hagop Kantarjian PI) ($ 7,883,576 incl. indirect costs; $1,576,715/year)
Not funded, Apr 01, 2019–Mar 31, 2024	Reprogramming GBM associated macrophages through targeting STING-TBK1 pathway NIH/NCI, 1R01NS110629-01 Co-Investigator (Y. Alan Wang PI) ($ 1,446,898 incl. indirect costs; $289,380/year) To elucidate how macrophages are polarized in GBM and how they contribute to GBM Progression. FP00005636
Not funded, Mar 01, 2019–Feb 28, 2022	Genetic and Pharmacological dissection of Mdm2 function in the hematopoietic microenvironment in AML Cancer Prevention & Research Institute of Texas (CPRIT), FP00005707 Co-Investigator (Michael Andreeff PI) ($ 855,001 incl. indirect costs; $285,000/year) To identify new targets in the leukemia niche whose inhibition prevents development of chemoresistance, and thus increases AML cures.
Not funded, Mar 01, 2019–Feb 28, 2022	Genome-wide analysis of circulating DNA methylation as predictors of aggressive prostate cancer in African Americans Cancer Prevention & Research Institute of Texas (CPRIT), RP190068 Collaborator (Jian Gu PI) ($ 854,937 incl. indirect costs; $284,979/year) To identify specific DNA methylation signatures for AA aggressive PCa tumors. Genome-wide analysis of circulating DNA methylation
Not funded, Sep 01, 2018–Aug 31, 2023	Optimal Stage and Timing for Leukemia Patients to Receive Stem Cell Transplants NIH/NCI, 1R01CA234032-01 Principal Investigator ($ 1,278,955 incl. indirect costs; $255,791/year)

	to develop statistical methods to identify the optimal timing for patients with chronic myeloid leukemia (CML) to receive stem cell transplants (SCTs), which were previously considered to be the preferred treatment for newly diagnosed CML.
Not funded, Sep 01, 2018–Aug 31, 2023	SPORE University of Texas M.D. Anderson Cancer Center-Leukemia NIH/NCI, 2P50 CA100632-16 Director, Core (Hagop Kantarjian PI) ($ 800,456 incl. indirect costs; $160,091/year) The Biostatistics, Data Management, and Bioinformatics Core will carry out data analyses using appropriate statistical methodology, contribute to interpretation of results through written reports and frequent interaction with Project investigators, and provide an integrated data management system to facilitate communication among all Projects and Cores.
Not funded, Sep 01, 2018–Mar 31, 2021	Genetics and Biology of Pancreatic Ductal Adenocarcinoma NIH/NCI, FP00001145_Rev1 Co-Investigator (Ronald DePinho PI) ($ 200,000 incl. indirect costs; $77,577/year) To a) elucidate oncogenic Kras (Kras*)-regulated metabolic pathways mediating pancreatic ductal adenocarcinoma (PDAC) tumor maintenance, b) define collateral metabolic dependencies, and c) establish how interventions targeting these processes influence tumor immunity, in order to guide the design of clinical trials with existing drugs and to identify new therapeutic points of attack. PID4317
Not funded, Sep 01, 2018–Aug 31, 2023	Mitigating KRAS mediated immune suppression to develop effective combinatorial immunotherapy for PDAC Cancer Med - Fellowship Prog, FP00003713 Biostatistician (Prateek Gulhati PI) ($ 437,075 incl. indirect costs; $87,415/year) Provide Statistical Support for aims/goals of the project.
Not funded, Sep 01, 2018–Aug 31, 2023	Developing Novel Therapeutic Approaches Targeting Macrophages in GBM NIH/NCI, 1R01CA231349-01 Co-Investigator (Y. Alan Wang PI) ($ 128,540 incl. indirect costs; $25,708/year) Elucidate the detailed molecular basis of TAM behavior and function during GBM progression, and further develop potential therapeutic strategies for GBM.
Not funded, Sep 01, 2018–Aug 31, 2023	Molecular Predictors Associated With Unique Ancestry Driven Prostate Cancer Health Disparities Among African Americans And Puerto Rican Men NIH/NCI, 1R01CA232326-01 Co-Investigator (Curtis Pettaway PI) ($ 1,508,985 incl. indirect costs; $301,797/year) To leverage the experience of our unique multidisciplinary team in defining the role of SNP rs7824364 in developing predictive models related to PCa diagnosis, disease phenotype, and cancer recurrence among AA and PR men.
Not funded, Jul 01, 2018–Jun 30, 2020	Personalized management of targeted therapy using dynamic prediction in cancer treatment NIH/NCI, 1R03CA219522-01A1 Co-Investigator (Shouhao Zhou PI) ($ 100,000 incl. indirect costs; $50,000/year) To develop a flexible quantitative approach to predict the longitudinal trajectory of the biomarker and disease progression for individual patients, which will facilitate personalized management of targeted therapy by optimizing the treatment duration to improve the outcome of patients with CML.
Not funded, Jul 01, 2018–Jun 30, 2019	Effective Combinatorial Immunotherapy for Pancreatic Ductal Adenocarcinoma Cancer Med - Fellowship Prog, FP00003568 Co-Investigator (Prateek Gulhati PI) ($ 49,998 incl. indirect costs; $49,998/year) Provide Statistical Support for aims/goals of the project.

Not funded, Apr 01, 2018–Mar 31, 2019	Personalized management of targeted therapy in cancer care MIKE HOGG FUND, FP00003171 Co-Investigator (Shouhao Zhou PI) ($ 25,979 incl. indirect costs; $25,979/year)
Not funded, Dec 01, 2017–Nov 30, 2019	Reactivation of p53 Function by Targeting Mutant Protein Conformation and Amyloid Aggregation in Acute Myeloid Leukemia NIH/NCI, 1 R21 CA222998-01 Co-Investigator (Michael Andreeff PI) ($ 275,000 incl. indirect costs; $137,500/year)
Not funded, Dec 01, 2017–Nov 30, 2019	Induction of mitochondrial protein folding stress by the first-in-class imipridone ONC201: Correlative studies in Phase1/2 clinical trial of ONC201 NIH/NCI, 1R21CA222990-01 Co-Investigator ($ 275,000 incl. indirect costs; $137,500/year) Test if ONC201 induces mtPFS in AML in vitro and in the ongoing clinical phase 1/2 trial; Test if ONC201 eliminates LSCs and if the levels of ATF4 and mtUPR induced by ONC201 are determinants of ONC201 cytotoxicity in LSCs in the ongoing clinical phase 1/2 trial; Investigate the molecular determinants of ONC201 efficacy and acquired resistance through genome-wide gene expression and mutation profiling of specimens obtained before/during/after treatment from patients enrolled in the ongoing clinical phase 1/2 trial.
Not funded, Nov 01, 2017–Oct 31, 2021	Ph1/2 Study of the Imipridone ONC201 for Treatment of AML IND125,203 (12/23/2014) Food and Drug Administration (FDA), 1 R01 FD006118-01 Co-Investigator (Michael Andreeff PI) ($ 1,740,973 incl. indirect costs; $435,243/year) To conduct a Phase 1/2 clinical trial and determine the safety and preliminary efficacy of the first-in-class Imipridone ONC201 in relapsed and refractory AML (Pending IRG Review as of 12.9.2017)
Not funded, Oct 01, 2017–Sep 30, 2020	Regulation of mitochondrial unfolded protein response as new therapeutic concept in AML Leukemia and Lymphoma Society, TRP1244417 Co-Investigator ($ 540,054 incl. indirect costs; $180,018/year) Investigate determinants of mtUPR in AML and its clinical relevance; Investigate determinants of mtPFS-induced apoptosis in AML; Test the hypothesis that the levels of mtPFS induced by ONC201 are correlated with response in an ongoing Phase 1/2 trial in AML
Not funded, Sep 01, 2017–Aug 31, 2022	Targeting Co-Aggregation of p53 Superfamily Members as Novel Therapy for Acute Myeloid Leukemia NIH/NCI, 1 R01 CA222238-01 Co-Investigator (Michael Andreeff PI) ($ 1,250,000 incl. indirect costs; $250,000/year) To test the hypothesis that isoforms of the p53 superfamily aggregate resulting in loss of function; To test anti-tumor effects of ReACp53 in wt p53 AML; To determine the preclinical potential of ReACp53 in AML.
Not funded, Sep 01, 2017–Aug 31, 2022	Integrating Multiple Data Sources to Examine the Generalizability of Treatment Effects on Breast Cancer NIH/NCI, 1 R01 CA221977-01 Principal Investigator ($ 2,000,000 incl. indirect costs; $400,000/year) the development of statistical tools to improve scientific inference on breast cancer comparative effectiveness research.
Not funded, Jul 01, 2017–Jun 30, 2019	Dynamic prediction for chronic myeloid leukemia NIH/NCI, 1R21CA220302-01 Co-Investigator (Shouhao Zhou PI) ($ 47,386 incl. indirect costs; $23,693/year)

	To develop numerical tools to improve personalized management of chronic myeloid leukemia. FP0000848
Not funded, Jun 01, 2017–May 31, 2022	Altering PDAC Microenvironment with In Vivo Gene Disruption RICE UNIVERSITY, FP00001733 Co-Investigator (Cassian Yee PI) ($ 1,376,000 incl. indirect costs; $275,200/year)
Not funded, Jul 01, 2016–Jun 30, 2019	Investigating Clinical Implication of Antecedent Clonal Hematopoiesis in t-AML/t-MDS American Society of Clinical Oncology (ASCO), 00016847 Statistician (Koichi Takahashi PI) ($ 187,398 incl. indirect costs; $62,466/year) We aim to develop an assay that will identify cancer patients who are at risk of developing t-AML/t-MDS.
Not funded, Apr 01, 2016–Mar 31, 2020	Statistical methods to Improve Early Cancer Detection by Longitudinal Biomarkers NIH/NCI, 1R01CA197861-01A1 Principal Investigator ($ 1,250,000 incl. indirect costs; $312,500/year)
Not funded, Apr 01, 2016–Mar 31, 2021	Role of ROS in the Transition from Pancreatitis to Pancreatic Cancer NIH/NCI, 1R01CA204276-01 Co-Investigator (Lu PI) To unravel the role of ROS and in particular the NOX pathway in this synergistic effect
Not funded, Apr 01, 2016–Mar 31, 2018	Real-time individual prognostic prediction using BCR-ABL in patients with CML NIH/NCI, 1R21CA205921-01 Co-Investigator (Shouhao Zhou PI) ($ 275,000 incl. indirect costs; $137,500/year) to develop powerful tools to predict the dynamic changes of BCR-ABL levels with survival time-to-events for individual patients, and facilitate personalized management of targeted therapy in patients with CML.
Not funded, Sep 01, 2015–Aug 31, 2020	MD Anderson Clinical Validation Center of Biomarkers for Agrgressive Breast and Prostate Cancer NIH/NCI, 1U01CA200459-01 Co-Investigator (Abenna Brewster PI) ($ 2,999,997 incl. indirect costs; $599,999/year) To provide the compelling scientific evidence needed to introduce EDRN Phase 3 validated circulating biomarkers into the clinical setting to enhance decision making
Not funded, Sep 01, 2015–Aug 31, 2020	The Therapy of AML NIH/NCI, 2P01CA055164-20A1 Co-Investigator (Andreeff PI) to support the clinical and laboratory based projects. This includes collaboration with investigators in the design and conduct of research studies, statistical modeling, hypothesis formulation and testing, and data analysis.
Not funded, Jul 01, 2015–Jun 29, 2020	Statistical Methods to Improve Early Cancer Detection by Longitudinal Biomarkers NIH/NCI, 1R01CA197861-01 Principal Investigator ($ 1,250,000 incl. indirect costs; $250,274/year) Early detection for initial cancer onset, disease progression and disease recurrence after treatment are vital for the improvement of cancer patient survival. This proposal is to develop sophisticated statistical analysis techniques that can take full advantage of the longitudinal biomarker data for early detection. We will also develop software programs for public use to help disseminate the proposed statistical methods and graphical visualization tools for their wide applications in cancer research and practice.

Not funded, Jul 01, 2014–Jun 30, 2017	Dual targeting of MAPK and AKT pathways in Ras-mutated AML American Society of Clinical Oncology (ASCO) Co-Investigator (Nitin Jain PI) ($ 187,398 incl. indirect costs; $62,466/year) To determine the proportion of patients achieving complete response rate (CRR, complete remission (CR) + CR with incomplete recovery of platelets (CRp)) as the best response within 4 cycles of the combination therapy.
Not funded, Jul 01, 2014–Jun 30, 2016	Targeting Oncogenic RAS mutations in AML: Mechanisms of Therapeutic Response and Resistance NIH/NCI, R21CA187704 Co-Investigator (Marina Konopleva PI) ($ 275,000 incl. indirect costs; $137,500/year) To identify the genetic changes associated with RAS-driven myeloid neoplasms by integrating insights about the genes/pathways that mediate drug resistance in mouse models with data from interrogating human AML specimens entered onto the dual MEK/AKT inhibitor trial to better understand therapeutic sensitivity and resistance in RAS-mutated AML.
Not funded, Dec 01, 2013–Nov 30, 2015	Bone Marrow Microenvironment and Chemo-resistance of Acute Myeloid Leukemia Leukemia and Lymphoma Society Co-Investigator (Michael Andreeff PI) ($ 692,562 incl. indirect costs; $346,281/year)
Not funded, Sep 01, 2013–Aug 31, 2016	A randomized clinical trial for patients with AML/MDS not fit for chemotherapy NIH/NCI, 1 R01 CA169113-01A1 Co-Investigator (Guillermo Garcia-Manero PI) ($ 1,250,000 incl. indirect costs; $416,667/year) Current clinical trials exclude patients with poor performance or other medical conditions except that being investigated. For most drugs investigated, this follows no logic and does not benefit the patient or the drug being investigated. We proposed a clinical trial for patients “not eligible” for clinical trials to investigate outcomes of this group of patients in a clinical trial.
Not funded, Jul 01, 2013–Jun 30, 2017	Macrophage-educated mesenchymal stem cells promote inflammatory breast cancer Susan G. Komen Breast Cancer Foundation Co-Investigator (Wendy Woodward PI) ($ 1,000,000 incl. indirect costs; $250,000/year)
Not funded, Jul 01, 2013–Jun 30, 2014	Molecular Characterization of de novo Accelerated Phase Chronic Myeloid Leukemia Conquer Cancer Foundation of the American Society of Clinical Oncology Co-Investigator (Maro Ohanian PI) ($ 50,000 incl. indirect costs; $50,000/year)
Not funded, Jun 01, 2013	A Multi-Institutional Summer Institute in the Training of Biostatistics NIH (Subcontract from Rice University), 1 T15 HL117445-01 Co-Investigator (Rudy Guerra PI) ($ 565,758 incl. indirect costs; $565,758/year) This summer program is to introduce undergraduate and early graduate students to the world of biostatistics with a view toward a career as a biostatistician.
Not funded, Apr 01, 2013–Mar 31, 2015	Hypoxia-Selective Kinase Inhibitors for Leukemia Therapy (CA120370) Department of Defense (DOD), Coeus #5273 Co-Investigator (Juliana Maria Benito PI) ($ 240,000 incl. indirect costs; $120,000/year) To provide mechanism-based rationale for eliminating leukemic cells within the hypoxic BM niches.
Not funded, Apr 01, 2013–Mar 31, 2018	The Therapy of AML (Core D) NIH/NCI, 2P01CA055164-20

	Co-Investigator (Michael Andreeff PI) ($ 556,930 incl. indirect costs; $111,386/year) To support the clinical and laboratory-based projects of this program project so that research studies are most efficiently designed, conducted, monitored, and analyzed.
Not funded, Apr 01, 2013–Mar 31, 2018	Targeting the extrinsic apoptosis pathway to eliminate AML stem/progenitor cells NIH/NCI, 1R01CA175111-01 Biostatistician (Bing Carter PI) ($ 1,125,000 incl. indirect costs; $225,000/year) To determine whether the extrinsic apoptosis pathway plays a role in the death of bulk AML cells and CD34+38- AML stem/progenitor cells, and to determine whether targeting IAPs and ARC and activation of the extrinsic apoptosis pathway eliminate CD34+38- AML stem/progenitor cells in vitro under biologically relevant conditions: leukemia/MSCs co-culture and hypoxia (pO2<1%) and in a murine model.
Not funded, Apr 01, 2013–Mar 31, 2015	Statistical methods for optimizing multi-stage cancer treatments NIH/NCI, 1 R21 CA176508 01 Principal Investigator ($ 250,000 incl. indirect costs; $125,000/year) To provide a new and easily implementable statistical approach to optimize treatment se- quence for recurrent diseases.
Not funded, Dec 01, 2012–Nov 30, 2015	Identifying the cellular hierarchy and drug response of AML using cytometric data Cancer Prevention & Research Institute of Texas (CPRIT), RP130023 Collaborator (Peng Qiu PI) ($ 813,865 incl. indirect costs; $271,288/year) To develop and apply topological methods to objectively extract the underlying continuum of cellular progression from single-cell data without requiring prior knowledge, and infer the dysregulation of differentiation and the drug response in patients with AML.
Not funded, Dec 01, 2012–Nov 30, 2015	Optimal personalized dynamic treatment regimes for recurrent diseases Cancer Prevention & Research Institute of Texas (CPRIT), RP130021 Principal Investigator ($ 915,721 incl. indirect costs; $305,240/year) To develop statistical methods and computer software to help oncologists optimize their patients' long-term treatment decisions.
Not funded, Dec 01, 2012–Nov 30, 2015	Elimination of AML stem/progenitor cells by activating the extrinsic apoptosis pathway Cancer Prevention & Research Institute of Texas (CPRIT), RP130457 Collaborator (Bing Carter PI) ($ 686,182 incl. indirect costs; $228,727/year) To determine whether the extrinsic apoptosis pathway plays a role in the death of AML bulk and stem/progenitor cells, whether IAPs and ARC are potential therapeutic targets in AML stem/progenitor cells and their microenvironment, and whether targeting IAPs and activation of the extrinsic apoptosis pathway eliminate AML stem/progenitor cells in vitro under biologically relevant conditions: leukemia/MSCs co-culture and hypoxia (PO2<1%) and in a murine model.
Not funded, Jul 01, 2012–Jun 30, 2017	Optimal personalized dynamic treatment regimes for recurrent diseases NIH/NCI, 1 R01 CA163717 01A1 Principal Investigator ($ 1,000,000 incl. indirect costs; $200,000/year) To develop, extend, and promulgate statistical methods for the optimization of personalized dynamic treatment regimes (DTRs) for recurrent diseases.
Not funded, Jun 01, 2012–May 31, 2014	A new analytic approach to optimal personalized treatments for recurrent diseases Patient-Centered Outcomes Research Institute (PCORI), Coeus #3507 Principal Investigator ($ 491,764 incl. indirect costs; $245,882/year)

	To develop statistical methods and computer software that can help patients with recurrent diseases optimize their treatment decision making.
Not funded, Apr 01, 2011–Mar 31, 2015	Establishing value-based quality metrics for colorectal cancer care NIH/AHRQ, 1 R01 HS020256 01 Statistician (Janice Cormier PI) ($ 1,285,280 incl. indirect costs; $321,320/year) To develop and validate a comprehensive quality of care metric that can establish national quality assessment benchmarks
Not funded, Jun 01, 2010–May 31, 2015	New Approaches to the Biology and Treatment of MDS (PC-C) NIH/NCI, 2 P01 CA108631 06 Co-Director (Hagop M Kantarjian PI) ($ 1,051,049 incl. indirect costs; $210,210/year) To provide biostatistical consultation and collaboration in the planning, conduct, analysis and reporting of MDS clinical trials, consult and collaborate with laboratory researchers evaluating the cellular and molecular basis of response, guide the design of high-throughput experiments, evaluate the prognostic significance of biological markers, and build and validate a prognostic model.
Not funded, Apr 01, 2010–Mar 14, 2014	Assessing significant changes in copy number from mapped sequence data NIH/NHGRI, 1 R01 HG005731 01 Investigator (Li Zhang PI) ($ 500,000 incl. indirect costs; $126,560/year) The overall goal of the grant is to develop statistical model and software for analyzing data generated from next generation sequencing (NGS) technologies. The capacity and the availability of the current methods are very limited for NGS data analysis. Our proposed methods will enable lots of new applications of NGS technology in genomic research.
Not funded, Mar 01, 2010–Feb 28, 2014	Methods for Copy Number Analysis of Next Generation Sequencing Data Cancer Prevention & Research Institute of Texas (CPRIT) Co-Investigator (Li Zhang PI) ($ 420,104 incl. indirect costs; $105,026/year)
Not funded, Sep 30, 2009–Sep 29, 2011	Outcomes of VEIL compared to standard lymphadenectomy for melanoma Feasibility a R01, NIH/NCI, 1 RC1 CA144961 01 Significant Contributor (Richard E. Royal PI) ($ 544,623 incl. indirect costs; $272,312/year) To conduct a phase ii randomized clinical trial of stage iii melanoma patients to lymphadenectomy, measure and compare 30 day post-operative complications, compare long-term limb volume changes and quality of life in patients undergoing standard open surgical technique or the VEIL procedure, and perform cost and cost-effectiveness analysis for each procedure.
Not funded, Sep 30, 2009–Sep 29, 2011	Functional Genomics of Bone Marrow Microenvironment in Acute Myeloblastic Leukem NIH/NCI, 1 RC1 CA145802 01 Biostatistician (Michael W. Andreeff PI) ($ 845,260 incl. indirect costs; $422,630/year) To investigate microRNA expression changes in leukemia-associated MSC and determine the genomic mutation profile in AML
Not funded, Jul 01, 2009–Jun 30, 2014	Targeting the Leukemia Microenvironment in FLT3-Mutated AML Burroughs Wellcome Fund, 01 Biostatistician (Marine Konopleva PI) ($ 750,000 incl. indirect costs; $150,000/year) The goal is to determine if blockade of CXCR4 can improve efficacy of FLT3 kinase inhibitors in AML cells with mutated FLT3; do determine the role of bone marrow hypoxia and explore hypoxia-targeted agents as potential therapeutics in AML with mutated FLT3; and to investigate changes in bone marrow stromal cells that contribute to chemoresistance in patients with this type of leukemia.

Not funded, Dec 01, 2007–Nov 30, 2009	Statistical Models for Leukemia and NonLeukemia Outcomes NIH/NCI, 1 R21 CA131757 01 Principal Investigator ($ 275,000 incl. indirect costs; $137,500/year) To develop a joint Cox hazards model for leukemic and non-leukemic outcomes, research data sets and do model validation, and software development.
Not funded, Dec 01, 2007–Nov 30, 2009	Joint Statistical Models for Leukemia and Treated-Related Outcomes NIH/NCI, 1 R21 CA131757 01 Principal Investigator ($ 250,000 incl. indirect costs; $125,000/year) (1) Develop a joint Cox proportional hazards model for leukemic and non-leukemic outcomes. (2) Apply the proposed method to research data sets and do model validation through sensitivity analyses. (3) Release user-friendly software to the scientific community.
Unknown, Jul 01, 2025–Jun 30, 2028	A Phase 2 Single-Arm Open-Label Pilot Trial Evaluating Zanidatamab (JZP598) in Patients with Early Stage HER2/neu Positive (HER2+) Breast Cancer (BC) NeoZanHER R01, AMERICAN SOCIETY OF CLINCAL ONCOLOGY Mentor (Taiwo Adesoye PI) ($ 62,714 direct costs;$ 199,997 incl. indirect costs; $66,666/year) To provide statistical support for overall goals and specific aims. FP00024396
Unknown, Apr 01, 2024–Mar 31, 2029	Epidemiology of Lymphomas in Latin America (ELLA) NIH/NCI, #TBA Other Significant Contributor (Luis Malpica Castillo PI) ($ 2,760,070 incl. indirect costs; $552,014/year) The main goals are to determine and validate predicted peptide-MHC immunopeptidomes for ATLL, and other T/NK cell and viral-associated NHL by mass spectrometry. FP00019600
Unknown, Jul 01, 2023–Jun 30, 2026	Phase Ib Trial of Azacitidine, Venetoclax and Allogeneic NK cells for Acute Myeloid Leukemia (ADVENT-AML) Subaward via Gateway For Cancer Research, #TBA OSC (Abhishek Maiti PI) ($ 1,499,997 incl. indirect costs; $499,999/year) We hypothesize that combining epigenetic therapy, apoptosis targeting, and cellular immunotherapy using azacitidine, venetoclax, and allogeneic NK cells will improve outcomes in patients with AML compared to either azacytidine/venetoclax alone or NK cells alone. FP00019078
Unknown, Jul 01, 2023–Jun 30, 2025	A Phase Ib Trial of Azacitidine, Venetoclax and Allogeneic NK cells for Acute Myeloid Leukemia Leukemia and Lymphoma Society, #TBA OSC (Abhishek Maiti PI) ($ 999,998 incl. indirect costs; $499,999/year) We hypothesize that combining epigenetic, apoptosis targeting, and cellular immunotherapy using AZA, VEN, and allogeneic NK cells will work synergistically and improve cure rates in patients with adverse-risk AML compared to either AZA-VEN alone or NK cells alone. FP00018453
Unknown, Jun 01, 2023–May 31, 2023	Combining Epigenetic, Apoptosis Targeting, and Adoptive Cellular Therapy for Adverse Risk Acute Myeloid Leukemia DKMS Stiftung Leben Spenden, #TBA OSC ($ 240,000 incl. indirect costs; $240,000/year) Conduct a phase Ib study of AZA, VEN and ex vivo expanded and activated allogeneic NK cells in patients with AML and perform correlative biomarker studies. FP00018240
Unknown, Sep 01, 2022–Aug 31, 2025	Developing novel targeted therapies of Advanced Myeloproliferative Neoplasms UTMDACC Cancer Center Support (Core) Grant - MRPA, #TBA Co-PD/PI (Kapil Bhalla PI) ($ 340,916 incl. indirect costs; $113,639/year)

To provide statistical support for overall goals and specific aims. (JIT review pending as of 1/31/2023) FP00017867

Unknown, Sep 2022–Sep 2026 FOREIGN COLLABORATION
FOREIGN COLLABORATION The Department of Defense (DoD) submission (Overall PI: Powel Brown; Project 1 PI: Samir Hanash) entitled "TRANS-END: A transformative program toward ending breast cancer through personalized risk assessment, tailored screening, and interception" will involve teams from Sweden and UK, and result in co-authorship of manuscripts with them. This proposal is responding to the sponsor announcement, "DoD Breast Cancer, Transformative Breast Cancer Research Award".

Unknown, Oct 01, 2021–Sep 30, 2024 Targeting RTK/SHP2-SOS1/RAS signaling cascade to enhance venetoclax-based therapy in AML
Leukemia and Lymphoma Society, #TBA
Biostatistician (Bing Carter PI) ($ 540,059 incl. indirect costs; $180,020/year)
To provide statistical support for overall goals and specific aims. FP00013660

CLINICAL PROTOCOLS

Past, 2019 A Phase I/II Study of Azacitidine, Venetoclax, and Gilteritinib for Patients with Acute Myeloid Leukemia or High-Risk Myelodysplastic Syndrome with an Activating FLT3 Mutation, 2019-0366
Statistical Collaborator (Short, Nicholas MD PI)

Past, 2018 A Phase I/II Study of Azacitidine, Venetoclax and Pevonedistat in Adults with Newly Diagnosed Secondary or Therapy-Related AML, 2018-0724
Statistical Collaborator (Short, Nicholas MD PI)

Past, 2018 Phase 1 Dose Escalation Study of CPX-351 for Patients with Int-2 or High Risk IPSS Myelodysplastic Syndromes and Chronic Myelomonocytic Leukemia after Failure to Hypomethylating Agents, 2018-0911
Statistical Collaborator (Montalban Bravo, Guillermo M.D. PI)

Past, 2018 A Pilot Study of Liposomal Cytarabine and Daunorubicin (CPX-351) in Combination with Gemtuzumab Ozogamicin (GO) in Relapsed Refractory Patients with Acute Myeloid Leukemia (AML) and Post-Hypomethylating Agent (Post-HMA) Failure High-Risk Myelodysplastic Syndrome (HR-MDS), 2018-0235
Statistical Collaborator (Alvarado, Yesid MD PI)

Past, 2017 A Combination of Cladribine, Idarubicin, Cytarabine (CLIA) and Quizartinib for the Treatment of Patients Age 65 or Younger with Newly Diagnosed or Relapsed/Refractory Acute Myeloid Leukemia (AML) and High-Risk Myelodysplastic Syndrome (MDS), 2017-0153
Statistical Collaborator (Yilmaz, Musa MD PI)

Past, 2017 Phase I/II Study of the Combination of Venetoclax (ABT-199), Ponatinib and Corticosteroids in Patients with Philadelphia Chromosome (Ph)-Positive and/or BCR-ABL Positive Acute Lymphoblastic Leukemia (ALL) and Lymphoid Blast Phase Chronic Myelogenous Leukemia (CML), 2017-0313
Statistical Collaborator (Ravandi-Kashani, Farhad M.D. PI)

Past, 2016 A Phase II Study of the Combination of Azacitidine and Pembrolizumab for patients with MDS, 2016-0343
Statistical Collaborator (Garcia-Manero, Guillermo M.D. PI)

Past, 2016 A Phase II Study of Isavuconazole Prophylaxis in Adult Patients with AML/MDS and Neutropenia, 2016-0373
Statistical Collaborator (Bose, Prithviraj MD PI)

Past, 2016 A Pilot Study of Different Doses of Ibrutinib in Patients with Chronic Lymphocytic Leukemia, 2016-0226
Statistical Collaborator (Bose, Prithviraj MD PI)

Past, 2016 Phase II Study of the Combination of Blinatumomab and Ponatinib in Patients with Philadelphia Chromosome (Ph)-Positive and/or BCR-ABL Positive Acute Lymphoblastic Leukemia (ALL), 2016-0792
Statistical Collaborator (Kantarjian, Hagop M.D. PI)

Past, 2016 Phase I/II Study of the Combination of Low-Intensity Chemotherapy and Venetoclax (ABT-199) in Patients with Relapsed/Refractory Acute Lymphoblastic Leukemia (ALL), 2016-0629
Statistical Collaborator (Jabbour, Elias J. MD PI)

Past, 2015 Organizational Factors that Improve Retention Among Research Nurses at MD Anderson Cancer Center, 2015-0383
Statistical Collaborator (Cortes, Jorge M.D. PI)

Past, 2015 Alternating or Combined Therapy with Axitinib and Bosutinib for Patients with Chronic Myeloid Leukemia in Chronic, Accelerated or Blastic Phases, 2015-0787
Statistical Collaborator (Bose, Prithviraj MD PI)

Past, 2015 Therapy of Early Chronic Phase Chronic Myelogenous Leukemia (CML) with Dasatinib, 2015-1040
Statistical Collaborator

Past, 2015 Administration of Jakafi (Ruxolitinib) to Patients with Previously Untreated High-Chronic Lymphocytic Leukemia (CLL): A Phase II Clinical Trial, 2015-0750
Statistical Collaborator (Estrov, Zeev M.D. PI)

Past, 2015 Phase I-II Study of Crenolanib Combined with Idarubicin and Cytarabine, and Crenolanib Combined with 5-Azacitadine in Acute Myeloid Leukemia Patients with FLT3 Activating Mutations, 2015-0207
Statistical Collaborator (Cortes, Jorge M.D. PI)

Past, 2015 A Phase 1b, Open-label Study of LY2510924, Idarubicin and Cytarabine in Patients with Relapsed or Refractory Acute Myeloid Leukemia, 2015-0436
Statistical Collaborator (Konopleva, Marina M.D. PH.D. PI)

Past, 2014 Phase II Combination of Lirilumab and Nivolumab with 5-azacitidine in Patients with Myelodysplastic Syndromes (MDS), 2014-0934
Statistical Collaborator (Garcia-Manero, Guillermo M.D. PI)

Past, 2014 Phase I Study of Hu8F4 in Patients with Advanced Hematologic Malignancies, 2014-0057
Statistical Collaborator (Cortes, Jorge M.D. PI)

Past, 2014 Phase I/II Study of Ruxolitinib Plus Decitabine in Patients with Post Myeloproliferative Neoplasm - Acute Myeloid Leukemia (AML), 2014-0344
Statistical Collaborator (Ravandi, Farhad M.D. PI)

Past, 2014 Augmented Berlin-Frankfurt-Munster Therapy Plus Ofatumumab For Young Adults With Acute Lymphoblastic Leukemia Or Lymphoblastic Lymphoma, 2014-0396
Statistical Collaborator (Rytting, Michael E. M.D. PI)

Past, 2014 Phase II Study of Sorafenib Plus 5-Azacitidine for the Initial Therapy of Patients with Acute Myeloid Leukemia and High Risk Myelodysplastic Syndrome with FLT3-ITD Mutation, 2014-0076
Statistical Collaborator (Ravandi, Farhad M.D. PI)

Past, 2014 Phase II Study of the Dose Adjusted EPOCH Regimen In Combination With Ofatumumab As Therapy For Patients With Newly Diagnosed Or Relapsed/Refractory Burkitt Leukemia, 2014-0123
Statistical Collaborator (Jabbour, Elias J. MD PI)

Past, 2014 Phase II Randomized Study of Lower Doses of Decitabine (DAC; 20 mg/m2 IV daily for 3 days every month) versus Azacitidine (AZA; 75 mg/m2 SC/IV daily for 3 days every month) versus Azacitidine (AZA; 75 mg/m2 SC/IV daily for 5 days every month) in MDS Patients with Low and Intermediate-1 Risk Disease Transfusion-Dependent versus Best Supportive Care (BSC) in MDS Patients with Low and Intermediate-1 Risk Disease Transfusion-Independent, 2014-0112
Statistical Collaborator (Jabbour, Elias J. MD PI)

Past, 2014 Combination of Nivolumab and Ipilimumab with 5-azacitidine in Patients with Myelodysplastic Syndromes (MDS), 2014-0930
Statistical Collaborator (Garcia-Manero, Guillermo M.D. PI)

Past, 2013 Leukemia SPORE Phase II Randomized Study of Decitabine Versus Decitabine and Carboplatin versus Decitabine and Arsenic in Relapsed, Refractory and Elderly AML and MDS, 2013-0543
Statistical Collaborator (Kantarjian, Hagop M.D. PI)

Past, 2013 Phase I/II Trial of MEK Inhibitor MEK162 in Patients with Relapsed and/or Refractory Acute Myeloid Leukemia and Patients with Poor Prognosis Acute Myeloid Leukemia Not Suitable for or Unwilling to Receive Standard Therapy., 2013-0116
Statistical Collaborator (Ravandi, Farhad M.D. PI)

Past, 2013 Randomized Study of Ibrutinib versus Ibrutinib Plus Rituximab (I Versus Ir) in Patients with Relapsed Chronic Lymphocytic Leukemia (CLL), 2013-0703
Statistical Collaborator (Burger, Jan A. M.D. PI)

Past, 2013 Administration of Jakafi (Ruxolitinib) for Symptom Control of Patients with Chronic Lymphocytic Leukemia (CLL): A Phase II Study, 2013-0044
Statistical Collaborator (Estrov, Zeev M.D. PI)

Past, 2013 Four-Arm Randomized Phase II Study of SGI-110: 5 days, versus 10 days, versus 5 days + idarubicin, versus 5 days + cladribine, in Previously Untreated Patients >/= 70 Years with Acute Myeloid Leukemia, 2013-0843
Statistical Collaborator (Kantarjian, Hagop M.D. PI)

Past, 2013 A Phase I/II Study of Weekly Schedule Of Brentuximab Vedotin Alone and In Combination With 5-Azacytidine In CD30-Positive Relapsed/Refractory Acute Myeloid Leukemia, 2013-0706
Statistical Collaborator (Jain, Nitin MD PI)

Past, 2013 Phase 2 Study of SGI-110 in Patients with Higher Risk MDS, 2013-0901
Statistical Collaborator (Garcia-Manero, Guillermo M.D. PI)

Past, 2013 A Phase 2 Study of Clofarabine, Idarubicin, Cytarabine, Vincristine, and Corticosteroids for Patients with Newly Diagnosed or Relapsed Mixed Phenotype Acute Leukemia, 2013-0073
Statistical Collaborator (Jabbour, Elias J. MD PI)

Past, 2013 Treatment of Relapsed or Refractory Acute Lymphoblastic Leukemia (ALL) with IPI-145, 2013-0204
Statistical Collaborator (O'Brien, Susan M.D. PI)

TEACHING AND TRAINING

FORMAL TEACHING, UNDER- THROUGH POST-GRADUATE

Apr 2023 Introductory Biostatistics (453/553), Guest Lecturer
Classromm teaching
Rice University

Mar 2020 Introductory Biostatistics (Stat 453/553), Guest Lecturer
Classroom Teaching
Rice University

2017 Survival Analysis (GS01 0023), Co-Teaching with Dr. Jing Ning
Rice Stat 547
The University of Texas MD Anderson Cancer Center

2013 Survival Analysis (GS01 0023/Rice Stat), Co-Teaching with Dr. Shouhao Zhou
The University of Texas MD Anderson Cancer Center

2009 Survival Analysis (GS01 0023/Rice Stat), Co-Teaching with Dr. E. Neely Atkinson
The University of Texas MD Anderson Cancer Center

LAB OR OTHER RESEARCH SUPERVISION AND TRAINING

Sep 2023–Present Direct Supervision - Postdoctoral Research Fellows (Research Mentor), The University of Texas MD Anderson Cancer Center
Sep 2023–Present, Can Xie

Jan 2022–Present Direct Supervision - Graduate Students (Research Co-Mentor), UTHSC-SPH
Jan 2022–Present, Yuanliang Yang (PhD)
Jan 2022–Aug 2024, Yuan Li (PhD)

Jun 2021–May 2024	Direct Supervision - Graduate Students (Research Co-Mentor), GSBS Jun 2021–May 2024, Yizhuo Wang (PhD)
Jan 2021–May 2024	Direct Supervision - PhD Students, GSBS Jan 2021–May 2024, Sunyi Chi (PhD)
Jan 2021–May 2023	Advisory Committees (Committee Member), The University of Texas MD Anderson Cancer Center Jan 2021–May 2023, Nicholas Short (Master Degree)
Jan 2020–Aug 2023	Direct Supervision - Graduate Students (PhD Thesis Advisor), UTHSC-SPH Jan 2020–Jan 2023, Can Xie (PhD)
2018–2020	Direct Supervision - Graduate Students (Dissertation Co-Supervisor of Ph.D. Student), Biostatistics Department, School of Public Health, The University of Texas at Houston Health Science Center 2018–2020, Bin Shi (Ph.D.)
Sep 2015–Dec 2019	Direct Supervision - Graduate Students (Research Mentor), The University of Texas MD Anderson Cancer Center Sep 2015–Dec 2019, Fang Xia (Ph.D.)
2014	Examining Committees, The University of Texas MD Anderson Cancer Center 2014, An, Xuebei 2014, Li, Jialu
Jan 2012–May 2014	Direct Supervision - Graduate Students (Thesis supervisor of master student), Biostatistics Department, School of Public Health, The University of Texas at Houston Health Science Center May 2014, Sun, Miao 2014, Chen, Ping Jan 2012, Rao, Xiayu
May 2009–May 2011	Advisory Committees (Dissertation committee member of Ph.D. student), Biostatistics Department, School of Public Health, The University of Texas at Houston Health Science Center May 2009–May 2011, Yi, Min
2009	Direct Supervision - Graduate Students (Dissertation supervisor of Ph.D. student), Statistics Department, Rice University 2009, Zhang, Nan (Jenny)
2009–Dec 2014	Direct Supervision - Graduate Students (Dissertation supervisor of Ph.D. student), Biostatistics Department, School of Public Health, The University of Texas at Houston Health Science Center Sep 2011–Dec 2014, Qiao, Wei Sep 2010–Dec 2014, Lin, E 2009, Wen, Sijin
2009–2015	

Direct Supervision - Graduate Students, The University of Texas MD Anderson Cancer Center

2015, Xia, Fang

2011, Saxena, Sheel

2011, Ni, Yang

2009, Tong, Pan

Sep 2007–Jun 2018 Direct Supervision - Postdoctoral Research Fellows, The University of Texas MD Anderson Cancer Center

Jun 2016–Jun 2018, Zhu, Yayuan

Jul 2010–Jul 2013, Choi, Sangbum

Sep 2007–Aug 2009, Ning, Jing

2004 Direct Supervision - Graduate Students (Dissertation supervisor of Ph.D. student), Rice University

2004, Fix, Gretchen A.

2003–Present Advisory Committees, The University of Texas MD Anderson Cancer Center

2017, Pan, Haitao

2017, Zhou, Yahong

2017, Liu, Na

2012–2015, Chen, Jiun-Sheng

2014, Zhu, Xuan

2003–2006, Dong, Wenlin

FORMAL TEACHING OF PEERS

2022–Present Innovative Phase II and III Oncology Clinical Trial Designs
University of Cincinnati

2021–Present From p-Value to q-Value
University of Puerto Rico

2021–Present Innovative Statistical Methods for Clinical Trials, Observational Studies and Bioassays
Rutgers University

May 20, 2020 Innovative Phase II Oncology Clinical Trial Designs
Biostatistics
Columbia University; New York, NY

Dec 07, 2018 Multi-State Models Joint with Functional Principal Component Analysis for Longitudinal Data
Statistics
Purdue University; West Lafayette, IN

Feb 2017 Using Longitudinal Biomarker Data to Dynamically Predict Time to Next Failure Event
Biostatistics
Johns Hopkins University; Baltimore, MD

Feb 2017 Connecting Short-Term Response with Long-Term Survival for Efficient Outcome-Adaptive Randomization in Oncology Clinical Trials
The Sidney Kimmel Comprehensive Cancer Center
Johns Hopkins University; Baltimore, MD

Feb 2017	Using Longitudinal Biomarker Data to Dynamically Predict Time to Next Failure Event Biostatistics The University of Texas Health Science Center at Houston; Houston, TX
Sep 2016	Using Longitudinal Biomarker Data to Dynamically Predict Time to Disease Progression University of Houston; Houston, TX
Oct 2012	Dynamic Prediction Models for Cancer Patient Disease Progression and Survival University of Rochester; Rochester, NY
Feb 2011	Using Information on Both Short-Term Response and Long-Term Survival in the Design of Oncology Clinical Trials Arizona State University; Tempe, AZ
Sep 2009	Using Short-Term Response to Facilitate Adaptive Randomization for Survival Clinical Trials University of Texas Health Science Center at Houston School of Public Health; Houston, TX
Apr 2007	Proportional Hazards Model with an Assumed copula for Dependent Censoring: A Sensitivity Analysis Approach Cleveland Clinic; Cleveland, OH
Oct 2006	Proportional Hazards Model with a Summed Copula for Dependent Censoring: A Sensitivity Analysis Approach Portland State University; Portland, OR
Oct 2006	Proportional Hazards Model with an Assumed copula for Dependent Censoring: A Sensitivity Analysis Approach Portland State University; Portland, OR
Sep 2006	A Parallel Phase I/II Clinical Trial Design for Combination Therapies University of Virginia; Charlottesville, VA
Oct 2005	Optimization of Multi-Stage Treatment Sequences for Recurrent Diseases Department of Biostatistics University of Pittsburg; Pittsburgh, PA
Sep 2004	Estimation of the Effects of Treatment Sequences on Survival Department of Biostatistics and Medical Informatics University of Wisconsin at Madison; Madison, WI
May 2002	The Analysis of Correlated Survival Data with Dependent Censoring Washington University at St. Louis, Division of Biostatistics and Siteman Cancer Center; St. Louis, MO
Apr 2002	The Analysis of Correlated Survival Data with Dependent Censoring Department of Biometry and Epidemiology Medical University of Southern Carolina; Charleston, SC
Apr 2002	The Analysis of Correlated Survival Data with Dependent Censoring Department of Preventive Medicine University of Southern California; Arcadia, CA
Apr 2002	The Analysis of Correlated Survival Data with Dependent Censoring Department of Biostatistics University of Florida; Gainesville, FL
Mar 2002	The Analysis of Correlated Survival Data with Dependent Censoring Department of Preventive Medicine Kansas University Medical Center; Kansas City, KS
Feb 2002	The Analysis of Correlated Survival Data with Dependent Censoring Department of Medicine, Division of Biostatistics

Indiana University; Indianapolis, IN

Feb 2002 The Analysis of Correlated Survival Data with Dependent Censoring
Center of Statistical Science
Brown University, Department of Community Health; Providence, RI

Jan 2002 The Analysis of Correlated Survival Data with Dependent Censoring
Department of Biostatistics
St. Jude Children's Research Hospital; Memphis, TN

PRESENTATIONS & TALKS

LOCAL

Nov 2011 Optimization of Dynamic Treatment Regimes for Recurrent Diseases
Peer-reviewed conference presentation
Houston Area Chapter of the American Statistical Association; Houston, TX

Feb 2006 A Parallel Phase I/II Clinical Trial Design For Combination Therapies
Peer-reviewed conference presentation
The University of Texas at Houston Health Science Center; Houston, TX

Apr 2003 The Analysis of Survival Data with Recurrent Events
Peer-reviewed conference presentation
University of Texas at Houston Health Science Center; Houston, TX

Mar 2003 A Frailty Model for Informative Censoring
Peer-reviewed conference presentation
Houston Area Chapter of the American Statistical Association; Houston, TX

Mar 2002 The Analysis of Correlated Survival Data with Dependent Censoring
Peer-reviewed conference presentation
University of Texas M. D. Anderson Cancer Center; Houston, TX

NATIONAL

Dec 14, 2020 Conditional Generative Adversarial Networks for Individualized Treatment Effect Estimation and Treatment Selection
Invited talk/seminar (Presenter)
ICSA; Houston, TX

Mar 2018 Optimal Timing of Stem Cell Transplant for Leukemia Patients
Invited talk/seminar (Presenter)
ENAR; Atlanta, GA

Aug 2017 Using Longitudinal Biomarker Data to Dynamically Predict Time to Disease Progression
Invited talk/seminar (Presenter)
Joint Statistical Meeting; Baltimore, MD

May 2017 Using Longitudinal Biomarker Data to Dynamically Predict Time to Disease Progression
Invited talk/seminar (Presenter)
Conference on Lifetime Data Science, University of Connecticut; Storrs, CT

Mar 2017 Using Longitudinal Biomarker Data to Dynamically Predict Time to Disease Progression
Invited talk/seminar (Presenter)
ENAR; Washington, DC

Aug 2016 Functional Data Analysis Approach for Using Longitudinal Biomarker to Predict Disease Progression

Invited talk/seminar (Presenter)
Joint Statistical Meeting; Chicago, TX

Jun 2015 New Methods for Quantitative PCR Data Analysis
Invited talk/seminar (Presenter)
qPCR & Digital PCR Congress:USA; San Diego, CA

Aug 2014 Dynamic prediction of time to disease relapse using longitudinal biomarker data
Joint Statistical Meeting
Peer-reviewed conference presentation (Presenter)
Boston, MA

Jun 2014 An information-cumulating model for predictive analysis continuously over time
Summer Research Conference jointly sponsored by the Southern Regional Council on Statistics (SRCOS) and the American Statistical Association
Invited talk/seminar (Presenter)
Galveston, TX

Jan 2012 Optimization of Dynamic Treatment Regimes for Recurrent Diseases
Peer-reviewed conference presentation (Presenter)
Bayesian Biostatistics Conference; Houston, TX

Aug 2011 Quantification of Real Time Polymerase Chain Reaction Data
Peer-reviewed conference presentation (Presenter)
Joint Statistical Meeting; Miami, FL

Jan 2011 Using Information on Both Short-Term Response and Long-Term Survival in the Design of Oncology Clinical Trials
Peer-reviewed conference presentation (Presenter)
Bayesian Biostatistics Conference; Houston, TX

Jan 2010 Control Covariate Imbalance in Clinical Trials with Response-Adaptive Randomization
Peer-reviewed conference presentation (Presenter)
Bayesian Biostatistics Conference; Houston, TX

Aug 2009 Achieving Covariate Balance in Clinical Trials with Outcome-Adaptive Randomization
Peer-reviewed conference presentation (Presenter)
Joint Statistical Meeting; Washington, DC

Mar 2009 Using Short-Term Response to Facilitate Adaptive Randomization for Survival Clinical Trials
Invited talk/seminar (Presenter)
Eastern Northern American Region (ENAR); San Antonio, TX

Aug 2008 Using Short-Term Response to Facilitate Adaptive Randomization for Survival Clinical Trials
Peer-reviewed conference presentation (Presenter)
Joint Statistical Meeting; Denver, CO

2007 Frailty Models for Survival Data with Informative Censoring
Joint Statistical Meeting
Invited talk/seminar (Presenter)
Salt Lake City, UT

Aug 2006 A Parallel Phase I/II Clinical Trial Design for Combination Therapies
Joint Statistical Meeting
Peer-reviewed conference presentation (Presenter)
Seattle, WA

Aug 2005 Estimation of the Causal Effects on Survival of Multi-Stage Nonrandomized Treatment Sequences for Recurrent Diseases
Joint Statistical Meeting

Peer-reviewed conference presentation (Presenter)
Minneapolis, MN

Aug 2002 The Analysis of Clustered Survival Data with Dependent Censoring
Joint Statistical Meetings
Peer-reviewed conference presentation (Presenter)
New York City, NY

Aug 2001 A Frailty Model for Informative Censoring
Joint Statistical Meeting
Peer-reviewed conference presentation (Presenter)
Atlanta, GA

INTERNATIONAL

Aug 2023 Dynamic prediction of disease progression for cancer patients by functional principal component analysis (FPCA) of high dimensional longitudinal expression levels of oncogenes
Peer-reviewed conference presentation (Presenter)
Joint Statistical Meeting; Toronto, Ontario
Canada

Jun 24, 2023 Bayesian Models Connecting Short-Term Response with Long-Term Survival for Efficient Outcome-Adaptive Randomization in Oncology Clinical Trials
Invited talk/seminar (Presenter)
International Society of Bayesian Analysis-Eastern Asia Chapter; Qingdao, Shandong
China

Jun 2017 Comparison of different approaches for dynamic prediction of survival using longitudinal biomarker data
Invited talk/seminar (Presenter)
International Chinese Statistical Association (ICSA) Applied Statistics Symposium; Chicago, IL

Dec 2016 Using Longitudinal Biomarker Data to Dynamically Predict Time to Disease Progression
Invited talk/seminar (Presenter)
The 10th International Chinese Statistical Association (ICSA) International Conference on Global Growth of Modern Statistics in the 21st Century; Shanghai China

Mar 2016 Dynamic Prediction of Time-to-Event Distributions
The International Biometrics Society
Invited talk/seminar (Presenter)
Eastern Northern American Region (ENAR); Austin, TX

Mar 2014 Dynamic prediction of survival outcomes and medical decision making
The International Biometrics Society, Eastern Northern American Region (ENAR)
Invited talk/seminar (Presenter)
Baltimore, MD

Jul 2012 Dynamic Prediction of Survival Time Using Longitudinal Data
Statistical Analysis of Multi-Outcome Data
Invited talk/seminar (Presenter)
Paris, France

Jun 2012 A Phase I/II Clinical Trial Design for Drug Combinations
Invited talk/seminar (Presenter)
Applied Statistics Symposium of the International Chinese Statistical Association; Boston, MA

Mar 2012	Optimization of Dynamic Treatment Regimes for Recurrent Diseases Peer-reviewed conference presentation (Presenter) The International Biometrics Society, Eastern Northern American Region (ENAR) Annual Meeting; Washington, DC
May 2011	Using Information on Both Short-Term Response and Long-Term Survival in the Design of Oncology Clinical Trials Invited talk/seminar (Presenter) Society of Clinical Trials (SCT) Annual Meeting; Vancouver, Canada
Mar 2011	Joint Accelerated Failure Time Models for Disease Recurrences and Survival Peer-reviewed conference presentation (Presenter) The International Biometrics Society, Eastern Northern American Region (ENAR); Miami, FL
Dec 2010	Semi-Parametric Analysis of Quantitative Polymerase Chain Reactions (PCR) Data Invited talk/seminar (Presenter) International Chinese Statistical Association Annual Applied Statistics Symposium; Huangzhou, China
Dec 2010	Using Information on Both Short-Term Response and Long-Term Survival in the Design of Oncology Clinical Trials Peer-reviewed conference presentation (Presenter) The 8th the International Chinese Statistical Association Conference
Aug 2010	A Nested Accelerated Failure Time Model for Times to Disease Recurrences and Survival Peer-reviewed conference presentation (Presenter) Joint Statistical Meeting; Vancouver, Canada
Jun 2010	Using Short-Term Response to Facilitate Adaptive Randomization for Survival Clinical Trials Peer-reviewed conference presentation (Presenter) The International Biometrics Society, Western Northern American Region (WNAR); Seattle, WA
Mar 2010	Normalization and Analysis of Longitudinal Quantitative Polymerase Chain Reaction (PCR) Data by Linear Mixed Models Peer-reviewed conference presentation (Presenter) The International Biometrics Society, Eastern Northern American Region (ENAR); New Orleans, LA
Nov 2009	Using Short-Term Response to Facilitate Adaptive Randomization for Survival Clinical Trials Peer-reviewed conference presentation (Presenter) International Conference for Design and Analysis of Experiments; Columbia, MO
Jul 2006	Estimation of the Marginal Causal Effects of Initial and Salvage Treatments for Recurrent Diseases The International Biometrical Society Peer-reviewed conference presentation (Presenter) Montreal, Canada
Jun 2006	Regression Survival Analysis with An Assumed Copula for Dependent Censoring The International Biometrical Society, Western Northern American Region (WNAR) Peer-reviewed conference presentation (Presenter) Flagstaff, AZ
Mar 2006	Estimation of Survival Functions and Covariate Effects Based on an Assumed Copula Accounting for Dependent and Independent Censoring The International Biometrics Society, Eastern Northern American Region (ENAR)

Peer-reviewed conference presentation (Presenter)
Tampa, FL

Jun 2005 Estimation of the Causal Effects on Survival of Two-Stage Nonrandomized Treatment Sequences for Recurrent Diseases
The International Biometrical Society, Western Northern American Region (WNAR)
Peer-reviewed conference presentation (Presenter)
Fairbanks, AR

Mar 2004 Joint Modeling Survival and Recurrent Event Data
The International Biometrics Society, Eastern Northern American Region (ENAR)
Peer-reviewed conference presentation (Presenter)
Pittsburgh, PA

Mar 2003 Monitoring Disease Status by Biomarkers
The International Biometrics Society, Eastern Northern American Region (ENAR)
Peer-reviewed conference presentation (Presenter)
Tampa, FL

Mar 2002 A Test for Independent Censoring Using Correlated Survival Data
The International Biometrics Society, Eastern Northern American Region (ENAR)
Peer-reviewed conference presentation (Presenter)
Arlington, VA

ORGANIZING CONFERENCES/CHAIRING SESSIONS

NATIONAL

2022 Statistical challenges and advances in integrative analysis of multi-omics data
Organizer for invited session
ENAR/IBS (international Biometric Society); Houston, TX

2017 Joint Modeling of Longitudinal Data, Recurrent Events and a Terminal Event
Organizer for invited session
Joint Statistical Meeting (JSM); Baltimore, MD

2016 Dynamic Prediction in Clinical Survival Analysis
Organizer for invited session
Joint Statistical Meeting (JSM); Chicago, IL

2009 Design of Early Phase Clinical Trials
Organizer of topic contributed session
Joint Statistical Meeting (JSM); Washington, DC

INTERNATIONAL

Aug 2023 Deep Learning-Based Risk Prediction and Other Advancements for Survival and Cure Analysis
Organizer
Joint Statistical Meeting; Toronto, Ontario
Canada

2011 Bioassay: Methodology for A Rapidly Developing Area
Organizer for invited session
International Chinese Statistical Association (ICSA) Applied Statistics Symposium; New York, NY

2010 Survival Analysis Advances for Medical Research
Organizer of topic contributed session
Joint Statistical Meeting (JSM); Vancouver, Canada

2009 Response-Adaptive Designs for Clinical Trials

Organizer of invited session
International Biometrics Society, Eastern Northern American Region (ENAR); San Antonio, TX

2007 Frailty Models for Survival Analysis
Organizer of Invited Session
The Joint Statistical Meeting of the American Statistical Association, Canadian Statistical Association, Western and Eastern Northern American Region of the International Biometrics Society, and the Institute of Mathematical Statistics; Salt Lake City, UT

2005 Recent Advances in the Analysis of Recurrent Events Data
Organizer of Invited Session
The International Biometrics Society, Eastern Northern American Region (ENAR); Austin, TX
